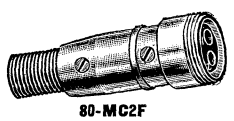
STAND CONNECTOR— Screws in to top of any standard microphone stand. Female thread is 5/8"-27. Finished in polished chrome brass. Permits easy removal of mike.

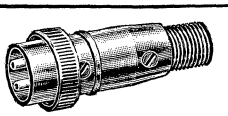
91-SC3F — 3-Contact Female ..... **$1.10 list**

91-SC4F — 4-Contact Female ..... **$1.20 list**

LOW-LOSS MICA FILLED INSERTS — Add "T" to catalog numbers and 7c to list for higher dielectric with improved power factor of low-loss **mica filled bakelite** inserts for connectors. NOTE: Not available in 75 Series.



80-MC2F



80-MC2M

1 AND 2 CONTACT CONNECTORS — CABLE TYPE —

For small coaxial cables, microphone cables, speakers and other connections. Standard sleeve type contacts and male prongs for positive contact. Unbreakable brass shell, polished chrome finish. Molded element of high dielectric black bakelite. Screw type coupling ring for tight connections and spring cord protector for cables up to 5/16".

	List
80-F — 1-Contact Female	**71c**
80-M — 1-Prong Male	**71c**
80-MC2F — 2-Contact Female	**88c**
80-MC2M — 2-Prong Male	**88c**

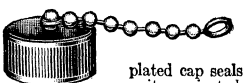
FOR LARGER CABLES — Male connectors like 80-M and 80-MC2M above except has larger back shell for use of a larger spring cord protector which accommodates cables to .410" diameter.

80-810 — 1-Prong Male **71c**

80-812 — 2-Prong Male **88c**

CHASSIS UNIT WITH COUPLING RING — For connection on chassis, panel or threading into microphone body with standard 5/8"-27 thread. Coupling ring engages 80-F or MC2F Cable Connector. Brass shell, chrome plated. With hex nut, lock washer, and flat washer. Mounts in 5/8" hole.

	List
80-MSP — 1-Pole Male	**88c**
80-SP-MC2M — 2-Pole Male	**99c**



CAP AND CHAIN— —Chrome plated cap seals open chassis units against dust, eliminating noisy connections. Used with any threaded 1 or 2-conductor chassis unit — PC1M, CL-PC1M, 80-C, 80-CR, PC2F, etc.

75-CCC-1 — Cap and Chain ..... **55c list**

CHASSIS UNITS — LOCK NUT MOUNTING — Shielded chassis connectors. Complete with lock washer and hexagon locking nut. Mounts in 21/32" hole.

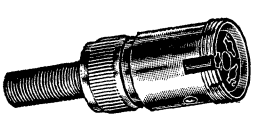
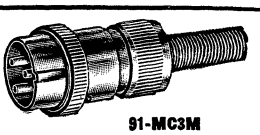
80-C — 1-Contact Female	**44c**
80-C1 — 1-Prong Male	**44c**
80-PC2F — 2-Contact Female	**49c**
80-PC2M — 2-Prong Male	**49c**

RIVETING PLATE CHASSIS UNIT — For fast mounting with rivets or replacement where units listed above are too small. 1 1/16" dia. plate part of entire unit, machined from solid brass, chrome plated. 27/32" mounting centers.

	List
80-CR — 1-Pole Female	**55c**
80-PC2-CR — 2-Pole Female	**60c**



91-MC3F



91-MC3M

3 AND 4 CONTACT MICROPHONE CONNECTORS —

Molded bakelite elements encased in unbreakable chrome-plated polarized brass shells. By removing cap and spring cord protector, connector can be screwed into microphone having 5/8"-27 thread, standard for this industry. Screw type coupling ring prevents accidental disconnections. 3-Contact connectors take cables up to 1/4" diameter, 4-contact to 3/8" diameter.

CHASSIS CONNECTORS For 13/16" hole in any panel or chassis up to 1/2" thick. Permanently fixed element in plated-brass shell. Complete with mounting ring, lock washer, and hex lock nut.

	List
91-PC3F — 3-Contact Female	**55c**
91-PC3M — 3-Prong Male	**55c**
91-PC4F — 4-Contact Female	**60c**
91-PC4M — 4-Prong Male	**60c**

CAP AND CHAIN— Chrome-plated cap seals open chassis units against dust, eliminating noisy connections. Use with any 3 or 4 contact chassis unit with threads.

91-CCC-3—For PC3F, PC4F, etc. ..... **55c list**

SPECIAL CHASSIS UNIT — Similar to regular chassis connector but for use on thick panels. Female units fit panels to 3/4" thick. Recessed solder lugs prevents physical damage and danger of shock. Use MC3M or MC4M as cable connector.

	List
91-SP-PC3F — 3-Contact Female	**$1.10**
91-SP-PC4F — 4-Contact Female	**1.20**

Special male units fit panels up to 3/8". Front extends 1/2". Chrome plated shell with coupling ring. Use with MC3F or MC4F cable connector.

AMPHENOL POLYWELD "912" (Coil Dope) FOR R.F., U.H.F & V.H.F. APPLICATIONS

Amphenol POLYWELD "912" is pure Polystyrene in solution with "916" thinner. It is designed for "doping," coating, impregnating and sealing in most Radio Frequency applications in the *Ultra-High* and *Very-High* frequency ranges.

POLYWELD is moisture-repellent because it is nonhygroscopic and will not normally support fungus growth. It may therefore be used where these conditions are encountered with a resultant improvement in the performance of radio equipment.

FAST-DRYING • STRONG-ADHERING • LOW-LOSS • UNIFORM IN APPLICATION •

Wherever critical components (coils, coil forms, capacitors, ceramics, bakelite, connectors, etc.) must be coated or sealed, Amphenol POLYWELD "912" can be accepted as the standard to obtain high dielectric functioning together with moisture-repellent qualities which will give excellent service within the temperature range of –70° F. to 160° F. In addition, the low power factor of POLYWELD "912" is a distinct asset wherever it is used in radio frequency circuits.

AMPHENOL CEMENTS

The following were developed especially for use with Amphenol polystyrene and other Amphenol transparent materials. The cements contain solvents of the material with which they are to be used, so that the joint is actually welded instead of merely glued.

FOR AMPHENOL "912-B"

For cementing the sheet stock, rods and tubing.

		List
No. 53-901-2	— 2-oz. bottle "901" cement	$ .50
No. 53-901-4	— 4-oz. bottle "904" cement	.65
No. 53-901-G	— In bulk, price per gal.	13.35
No. 53-901-2T	— 2-oz. bottle "901" thinner	.25
No. 53-901-GT	— Bulk thinner, price per gal.	2.00

FOR AMPHENOL THIN SHEETS

For cementing the thin sheet stock (from .015" to .050")

		List
No. 53-904-2	— 2-oz. bottle "904" cement	$ .50
No. 53-904-4	— 4-oz. bottle "904" cement	.65

No. 53-904-2T	— 2-oz. bottle "904" thinner	.25
No. 53-904-GT	— Bulk thinner, price per gal.	2.00

FOR AMPHENOL RIBBON

For cementing Amphenol Ribbons (from .001" to .010") together or to wood, paper, glass, etc., use the following:

		List
No. 53-207-2	— 2-oz. bottle "207" cement	$ .50
No. 53-207-4	— 4-oz. bottle "207" cement	.65
No. 53-207-G	— In bulk, price per gal.	13.35
No. 53-207-2T	— 2-oz. bottle "207" thinner	.25
No. 53-207-GT	— Bulk thinner, price per gal.	2.00

POLYWELD "912" as a cement is for use with "912-A" Polystyrene products, and ACRYWELD "901" (cement only) is for use with "912-B" Acrylic products (each being specially designed for use with these materials), will actually "weld" the parts together so as to create a homogeneous unit.

Will Not Harm Silk, Celanese, Enamel or Cotton Coverings

POLYWELD "912" has high density and a relatively heavy body with low viscosity which creates a substance easy to apply in both thin and thick coatings. Usually only a thin coating is required. It is heavily bodied and may be diluted 25 to 30% with No. 916 Thinner, thus making the use of POLYWELD extremely economical. It has high resistance and minimum surface leakage at *Ultra-High* and *Very-High* frequencies and can be used for almost all radio frequency applications. Its high potential breakdown makes it substantially puncture-proof while its unusual flexibility develops an ideal material for use in high-voltage R.F. circuits.

The use of POLYWELD "912" will not affect the electrical characteristics of coils within most frequency ranges.

66-166 — Bottom Hex. Fitting with screw and solder-lug	18c
66-60T — J — Insulator Tube as described above can be fitted together and cemented with Liquid "912-A" as feed-thru for H.F. and high voltage lines and as forms for R.F., Ant., and I.F. coils. Overall length 2¼", diameter is ½" for 2" of the length and ⅜" for the remaining ¼". Has ¼" hole thru center	30c
66-63B — H — Insulator Base (Bushing) — Versatile type of feed-thru bushing for H.F. or high voltages. Used with tubes "J" and hardware above for assembling many types of insulators. Overall length 1"	30c

F— STUB INSULATOR — Similar to "D" No. 66-60 but length of insulator is only 1". For mounting coils, condensers, and other parts carrying H.F. or high voltage currents. Overall length, 1⅞".

66-61 ..... 97c

G—K— LARGE AND SMALL STAND-OFF U.H.F. INSULATORS — Of Amphenol "912-A" polystyrene. For indoor or outdoor use. Nonhygroscopic. Large type ¾" in diameter. Small type ½" in diameter. Wire held in place by screw or solder-lug. Hex screw for binding wire in place.

Number	Length	Diameter	List

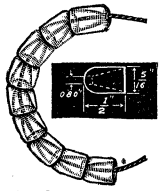
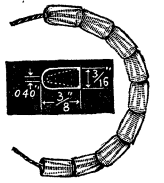
66-5 — Large	6"	¾"	1.80



5/16" POLYSTYRENE BEADS — Widely used Amphenol insulating beads can be strung on wires up to No. 12 solid or No. 14 stranded. Hole diameter is .080"; length ½"; overall diameter is 5/16". When stringing cables figure 28 beads to the foot.

73-102 — Box of 250 Beads ..... **$2.50 per box list**



3/16" POLYSTYRENE INSULATING BEADS A small bead for use in small transmission lines on wires up to No. 22 stranded or No. 20 solid wires. Hole diameter, .040"; length ⅜"; overall diameter 3/16". When stringing cables figure 35 beads to the foot.

73-012 — Box of 500 Beads ..... **$4.50 per box list**

TWO-WIRE POLYSTYRENE BEADS — A two hole bead for making balanced lines strung on wires up to No. 18 solid. Hole diameters, .050"; length, ½"; overall diameter is 11/32". When stringing cables figure 27 beads to the foot.

73-020 — Box of 250 Beads ..... **$3.25 per box list**

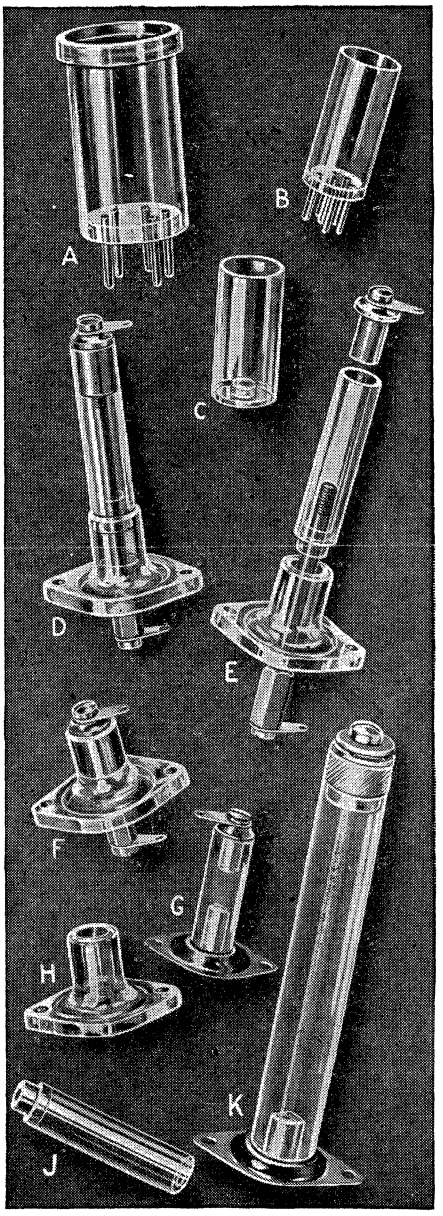
5/16" HIGH TEMPERATURE BEADS — Like No. 73 listed above but of mica-filled bakelite for use up to temperatures of 285° F.

73-103 — Box of 250 Beads ..... **$5.00 per box list**

3/16" HIGH TEMPERATURE BEADS — Like No. 73-1 beads above but of mica-filled bakelite for use up to temperatures of 285° F.

73-013 — Box of 500 Beads ..... **$8.50 per box list**

Amphenol "POLYWELD" is the proven efficient coil dope and plastic cement and sealer—completely listed on page 29.



U.H.F. ALIGNMENT TOOL —

Made of pure polystyrene Amphenol "912-A". Has no capacity effect when aligning critical circuits. A necessary tool for servicemen, laboratory technicians, amateurs and anyone who must make adjustments on high and ultra-high frequency and critical circuits.

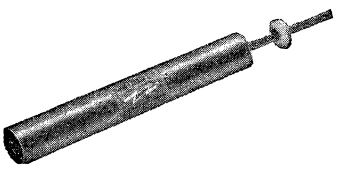
ANDREW • COAXIAL CABLE



COAXIAL CABLE

Coaxial cable is used wherever high frequency current must be conducted from one point to another as in transmitting and receiving installations, police and amateur communications, phase sampling lines, induction heating, and testing circuits.

Gas-filled coax offers extremely high efficiency, low loss, and complete shielding, together with durability, weatherproof operation, and trouble-free service.

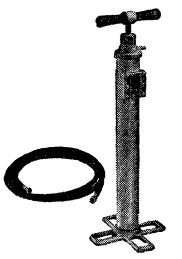
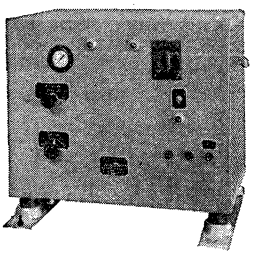
DRY AIR PUMPS



878



H-1800-A

For supplying dehydrated air under pressure to coaxial cable or to any other apparatus requiring the exclusion of moisture. The air is forced through moisture-absorbing silica gel, which when saturated may be replaced or reactivated by heating. Gel changes color to indicate saturation.

TYPE 878 Manually operated dry air pump, with lucite window for observing color changes in gel..... **Price, $35.00**

TYPE H-1800-A Automatic dehydrator, with motor driven compressor. Fully automatic, maintains constant pressure, self reactivating ..... **Price, $275.00**

TURBO ELECTRICAL INSULATING MATERIALS

No electronic installation, eqiupment, instrument, control or operational adjunct can be better than its insulating material. For this reason, the TURBO line is built around the quality factor from raw material through fabrication to final inspection. This condensed description of TURBO products will help you specify the proper material for your job.

TUBING — SLEEVING
TAPES—PAPERS—MICA
CLOTHS—SPECIALTIES

Product	Construction	Characteristics	Sizes
TURBOTUF VARNISHED TUBING	Braided from selected Cotton Yarns impregnated with flexible insulating varnish.	Thoroughly impregnated. Flexible, high tensile strength. Non-peeling, non-cracking, moisture, oil, and acid resistant, slow burning.	ID range from No. 24 (.020 inch) to 1 inch. Standard strand length 42".
TURBOTUF SATURATED SLEEVING	Braided in the round from Selected Cotton Yarns . . . impregnated with varnish.	All purpose insulation for lower dielectric ranges. Other properties as above.	ID range from No. 20 (.034) to 1½ inch.
TURBO EXTRUDED SLEEVING	Extruded from three grades of standard Vinylite resin plastics.	Desirable electrical characteristics . . . low moisture, high dielectric, good oil and acid resistant factor. 5 colors and transparent.	ID range from No. 20 (.034 inch) to 1½ inch.
TURBO GLASS FIBER TUBING	Closely woven from fibrous glass yarn.	Outstanding dielectric and high heat risistance features.	ID range from No. 20 (.034 inch) to ⅜ inch.
TURBOTHERM EXTRUDED INSULATED WIRE	Plastic insulation over solid or stranded conductor.	Desirable electrical characteristics. Resists soldering heats up to 550° F.	Fine gauges — Nos. 18 to 30.
TURBO VARNISHED CAMBRIC	Designed and processed to provide maximum tensile strength coupled with fundamental dielectric values.		
VARNISHED AND MICA TAPES	Highly resistant to heat-oil-water. Mica tape, fabricated from mica splittings faced with insulating paper. Provides superior dielectric properties.		
MICA—PLATE, BLOCK, FILM	India, Madras and Brazilian Mica selected exclusively for electrical purposes—graded, fabricated and inspected for particular requirements.		
TURBO WIRE MARKERS	Identifying markers, snug fitting—non-projecting—permanently legible—hazard proof.

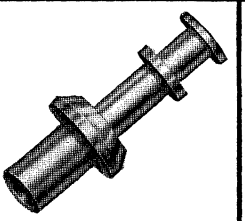
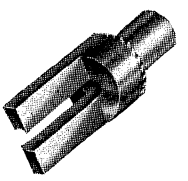
CTC STANDARDIZED DESIGNS SPEED DEVELOPMENT and PRODUCTION

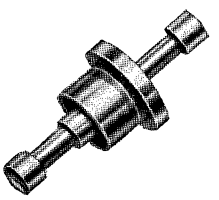
1. CTC Turret Terminal Lugs for speedy assembly by swaging. Quick soldering and firm holding. Of heavily-silvered brass, these lugs heat quickly, assuring neat, positive wiring. Stocked to fit 1/32", 1/16", 3/32", 1/8", 3/16" and 1/4" boards. Available with single or double soldering spaces. Also in midget sizes for extremely compact units.



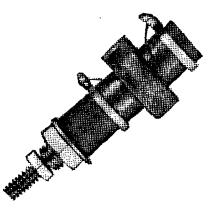
2. CTC Split Terminal Lugs. A .050" hole through the lugs permits wiring from top or bottom without drilling. Ideal for transformers and other potted units requiring soldering after potting. Knurled base prevents twisting. Brass, heavily silver plated, stocked to fit 3/32" and 5/32" terminal boards.



3. CTC Double-End Terminal Lugs. Two terminal posts in one swaging operation. Neat, positive wiring from top or bottom of board. Brass, heavily silver plated. Stocked to fit 3/32" and 5/32" boards. Also in midget sizes for extremely compact units.



4. CTC Slug Tuned Inductors. Easy-to-mount LS3 slug tuned coils are available in five windings, covering from 1/2 mc to 184 mc. The unit is extremely small and compact — only 1 1/8" high when mounted. Coils of practically any shape and size are also available to your specifications.

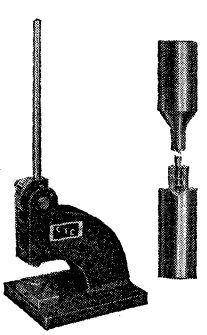


5. Mathematically Dimensioned Crystals. This new CTC development assures consistent performance, guarantees high activity and long life in every CTC Crystal. But one of 21 steps and checks that protect quality of CTC Crystals.

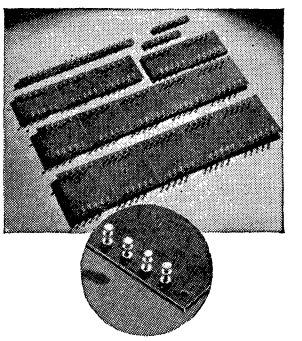
6. CTC Pressure and Hand Swagers. Quickly and surely swage all CTC standard lugs to terminal boards.

Pressure Swager fits all board thicknesses and swages lugs up to 1 7/8" from edge of board. Additional anvils and punches to fit all Standard Lugs supplied on request.

Hand Swager base is gripped in a vise and the rolling tool struck with a hammer.



7. CTC Terminal Boards. All-Set Terminal Boards stocked in 4 widths: 1/2", with single row of lugs; 2", with double row of lugs 1 1/2" apart; 2 1/2", with double row of lugs 2" apart, and 3", with double row of lugs 2 1/2" apart. Three board thicknesses available, 3/32", 1/8" and 3/16". Designed to properly mount, standard types of resistors and capacitors. Special boards can also be made to your specifications using any type of CTC lug.



8. Special Coils. Units pictured are but a few of the special Coils designed and manufactured to customer's specifications. CTC can design and manufacture coils of practically any size with any style winding, and varnished or impregnated to meet the most rigid requirements.

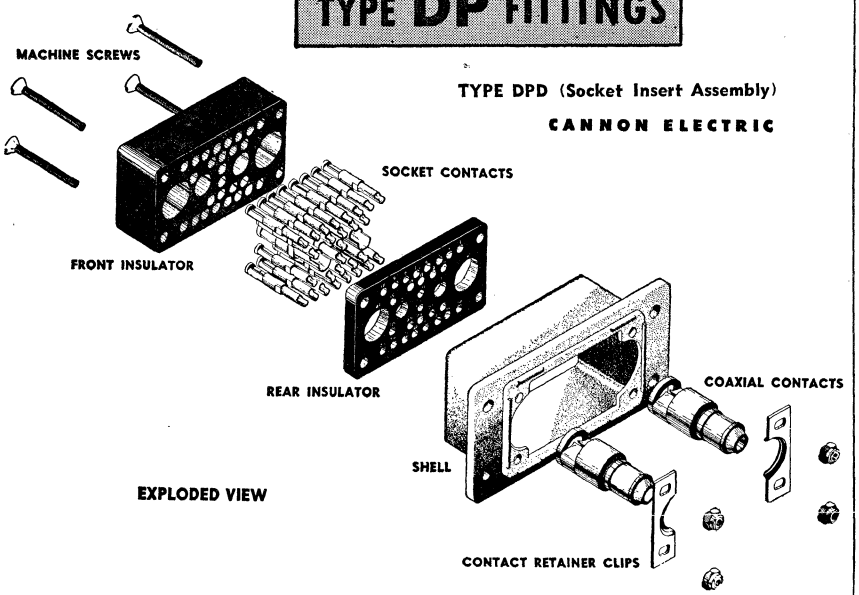
TYPE DP FITTINGS



EXPLODED VIEW

TYPE DPD (Socket Insert Assembly)

CANNON ELECTRIC

In design, this series of connectors differs from the majority of Cannon Connectors. Type DP Fittings are rectangular in shape, and polarization is affected by the arrangement of the contacts within the connectors. A wide variety of contact arrangements is available with contacts ranging from 10-amp. to 40-amp. capacity and with low impedence Coaxial contacts of 10-amp. capacity providing for continuous shielding available in some types. Standard shells are aluminum finished in sand blast and clear lacquer; some types are available in zinc, sand blast and clear lacquer finished. Contacts are brass, silver-plated. Insulation is phenolic, with low loss wax impregnated ceramic insulation used in coaxial contacts. Leading uses of the Type DP Connectors are in rack and panel instrument and radio equipment where weight and space saving are important factors. A complete bulletin on DP Connectors is available on request.

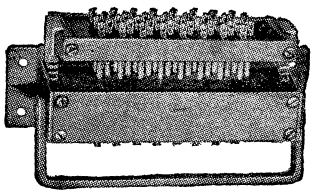
The cutaway view of Type DP plug and receptacle, both mounted, illustrates the method of application in rack equipment for radios and general instrument equipment. The use of this type of connector makes it possible to easily and quickly remove the rack portion without losing time in disconnecting all the wires. Although coaxials are not available in panel-type connectors now tooled, the design is adaptable to their use.

"DPR" Rack Type—Complete Unit



Rack type fittings are used where large numbers of contacts must be repeatedly coupled and uncoupled, the coupling and uncoupling being performed by means of a geared movement operated by a bail type handle. The dimensions over all measure $5\frac{23}{32}$" x 3" x $2\frac{31}{32}$" (including swing of bail). Has four holes for No. 8 Mounting Screws.

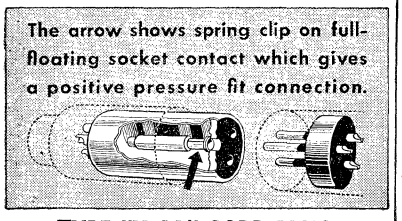
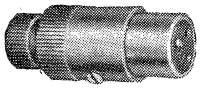
TYPE X FITTINGS

CANNON "TYPE X" PLUGS AND RECEPTACLES—The "Type X" Series of small connectors offers inexpensive fittings of reliable quality for sound service, radio, public address systems and geophysical research. In addition to compactness, many exclusive Cannon features are embodied in this series, such as full floating contacts in all socket inserts. Solder pot cable connections are easily accessible. Cable glands are removable. Contacts are so positive that no latching device is needed for ordinary uses.



TYPE "X-11" CORD PLUG (With Socket Insert)



ONE-HALF ACTUAL SIZE

Sturdily built for dependable service. Light in weight. Shell is diecast zinc, nickel finish. Will take $\frac{3}{16}$ to $\frac{9}{32}$" cable. Used in conjunction with the following: X-14 Wall Receptacle, X-12 Straight Cord Plug, and X-42 Microphone Receptacle X-44L Receptacle.

The X-44L is an adaptation of the X-42. It has a longer shell body and provision for protection against foreign matter or water getting into the receptacle. A protecting cap with spring covers the receptacle opening. Specially designed for use on outside poles or buildings. **(Write factory for availability and prices.)**

TYPE XK FITTINGS

CANNON "TYPE XK" PLUGS AND RECEPTACLES — A quality line of Connectors, similar in design and construction to the "Type X" Series, but equipped with the fast-acting, sturdy Acme Threaded Coupling Ring and, therefore, ideal for use on equipment which is subjected to considerable vibration and tension on cables, such as on sound trucks and other portable units.

Quick-acting locking ring Plugs and receptacles cannot be accidentally disconnected by jarring apart due to vibration or pulling on lines. 2 types of threaded coupling rings are shown below at A & C. Full-floating 'napkin ring' type socket contact. Pin and insert protected by shell. Built to withstand hard service. (B) Correct polarization governed by layout arrangement.

TYPE XL FITTINGS

The new Cannon Electric Type "XL" Connector combines various features found in other Cannon types into a small fitting comparable only in size to the Type "X" for low level sound transmission circuits. Among the leading features are the following: (1) convenient latchlock device to hold connector tight. (2) lightweight. (3) polarizing means (4) compression gland with relief spring or integral clamp, if desired. (5) streamlined design. (6) tapped metal for insert retaining screw. (7) provision for special grounding contact. Contacts are 15-amp. for No. 14 B&S stranded wire. Shell is zinc or steel, with various finishes available, bright nickle being standard. Satin-chrome finish available on steel shells. Min .flashover voltage, 1500 (250 working voltage). Packed in boxes of 10 identical fittings.

TYPE P FITTINGS

CANNON "TYPE P" FITTINGS. Universally used in sound and allied applications. "Type P" Fittings include a size and type for every requirement, all of a high standard of quality. All 90° Plugs, Pins and Sockets have split-shell construction for quick, easy access for wiring or inspection. Splash-proof, but not weather-proof. Plug and receptacle dust caps are available for use under severe dust conditions. Laboratory tests show an average voltage-drop of not more than 10 millivolts, with current flowing at the rated capacity. Insulating material is black phenolic which has a 0.7% absorption in 24 hours of immersion in water and a dielectric strength of 550 volts per mil at 60 cycles. P2-CG-11, P3-CG-12 and P3-CG-12 are furnished with rubber reducer bushing to accommodate 9/32" cable.

TYPE AP FITTINGS

CANNON TYPE "AP" CONNECTORS are standard for many radio, telephone and instrument applications. Standard Mounting Units, Dust Caps. Contacts are Cannon full-floating, non-twisting, silver-plated; solder pots tinned for easy wiring. 30-amp. contacts use No. 10 stranded wire or No. 8 solid. 15-amp. use No. 14 stranded wire or No. 11 solid. Six insert arrangements having 2, 3, 4, 5, 6 and 8 contacts available. Cord connector items have cable clamp for ½" and ⅝" cable. Insert diameter 1". Standard insert insulation material is phenolic; melamine by special request. Finish, cadmium plate on most items; others sand blast and clear lacquer. A complete bulletin with dimensional and production illustration drawings is available upon request.

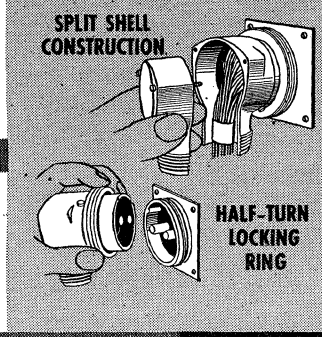
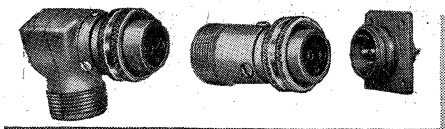
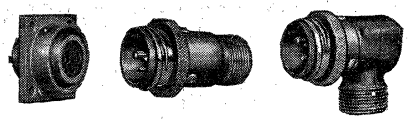
CANNON
TYPES K & RK PLUGS FOR AIRCRAFT

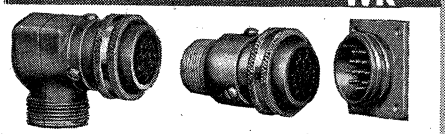




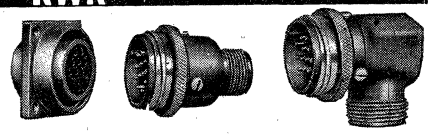
WK



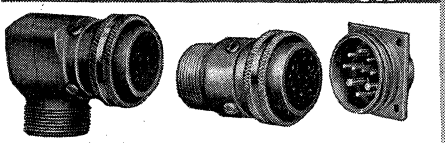
RWK



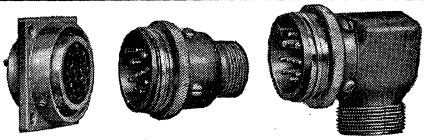
GK



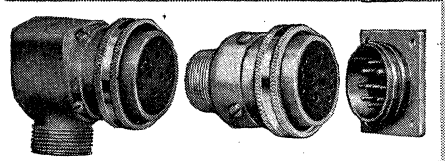
RGK



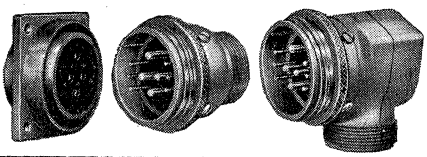
SK



RSK



NK



RNK

The Type "K" Series was designed especially for use in the aircraft field and is used almost universally for aircraft radio, instrument and electrical circuits. Although light in weight, units are rugged and durable. The "K" Series is made in 3 basic types: (1) Straight Type. (2) 90° Type. (3) Wall Mounting Unit, for which either straight or right angle junction shells are provided. Inserts of laminated and molded phenolic are removable.

The cable entry is regularly threaded for various sizes of aircraft flexible conduit, but there are fittings also available with cable clamp for special applications. The "K" Series is comprised of 8 diameters, with a great variety of contact arrangements covering a range of from 1 to 82 contacts, depending, of course, upon the diameter. 188 insert arrangements.

A key and groove arrangement makes it possible to connect fittings easily and quickly without the necessity of fumbling to match pins and sockets. This eliminates any possibility of forcing together in improper alignment and thus bending or breaking pins. Large contacts may be removed for soldering, thereby eliminating the possibility of damaging the insert with excessive heat.

Quick, easy access to solder pots at back of contact is made possible simply by removing either 3 or 4 Shakeproof Sems, depending upon the size of the fitting. Since these screws are equidistant, the barrel and insert may be rotated to accommodate 3 or 4 different positions. This is also true of the flanges on wall mounting units, making it easy to rotate these fittings to facilitate cable installation and avoid sharp bends in conduit.

Plugs and receptacles are locked together by means of a quick-acting threaded nut which holds both members firmly together and prevents shaking or accidentally pulling them apart. 10 to 250-amp. contacts.

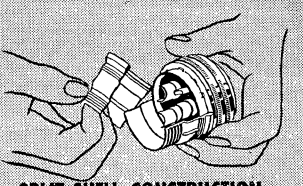
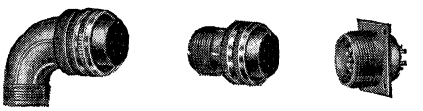
CANNON
TYPE AN PLUGS FOR AIRCRAFT





16

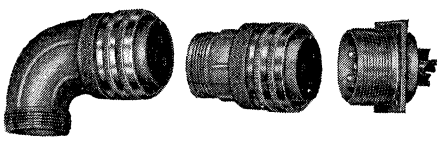
20



22

MORE THAN 200 INSERT ARRANGEMENTS AVAILABLE

CANNON "Type AN" Series of plugs and receptacles was designed especially to meet Army-Navy Specifications for aircraft electrical connectors. While the AN Series retains all the basic features of the Type K Series—features which have established conclusive proof of their effectiveness as applied to aircraft—numerous changes in design and construction have been made to conform to latest Army-Navy Specifications.

Type AN Plugs are made in three basic shapes or styles. These are: 1. Straight cord connectors. 2. Right angle or 90° cord connectors. 3. Flanged connectors for wall mounting. An almost unlimited combination of circuits and current capacities can be handled with AN connectors and their interchangeable inserts.

Removable and interchangeable inserts make it possible to change any fitting from a pin to a socket, or vice versa, and also to change the number of circuits handled through any fitting provided the inserts are of the same diameter. The split shell, a feature pioneered by Cannon, makes it easy to install wiring or to solder contacts.

An important feature of the Type AN Series is the means provided for coupling the members together. This consists of a coupling nut which serves to draw the parts together and to release them, while it also prevents plugs and receptacles from being jarred apart by excessive vibration. No special tools are required to lock or unlock plugs and receptacles, to separate split shells or to remove inserts. This feature is invaluable, since it eliminates delay in servicing in the field and also because there are so many combinations possible with Type AN Series.

"300" SERIES PLUGS AND SOCKETS

General Specifications

2 Contacts to 33 Contacts. All plugs and sockets are polarized.
2 Contact Plugs and Sockets are round, others rectangular.
Plugs of one size cannot fit into sockets of another size.
Phosphor bronze "knife-switch" type socket contacts engage both sides of flat plug contacts—double contact area.
Molded Bakelite insulation.
Formed metal caps. Formed fibre linings in caps.
Small size, with good separation between contacts.
Plug or socket for panel mounting.
Plug or socket with cap.
Simple, fool-proof assembly.
Finish on caps—Black Crystal.
Plug prongs—$\frac{5}{32}$" wide by $\frac{3}{64}$" thick.
We suggest using the 300 series in circuits not exceeding 45 Volts and 5 Amps., although circuit characteristics may permit higher ratings.

"400" SERIES PLUGS AND SOCKETS (Formerly "Heavy Duty")

General Specifications

2, 4, 6, 8, 10 and 12 Contacts.
All plugs and sockets are polarized.
Phosphor bronze "knife switch" type socket contacts engage both sides of flat plug contacts—double contact area.
Molded Bakelite insulation.
Fibre linings in caps.
Plug or socket for panel mounting.
Plug or socket with caps.
Finish on caps—Black Crystal.
Plug prong cross section ¼" x 1/16".
Locking fittings available for panel types or extension cables as shown.
We recommend using the 400 series in circuits not exceeding 110 Volts and 10 Amperes, although circuit characteristics may permit higher ratings.

"500" SERIES PLUGS AND SOCKETS

For Complete Listing of 500 SERIES, Write for No. 500 Catalog

Designed for 5,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}$" x $\frac{3}{32}$".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from $\frac{1}{2}$" diameter and $1\frac{1}{4}$" diameter in steps of $\frac{1}{8}$", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

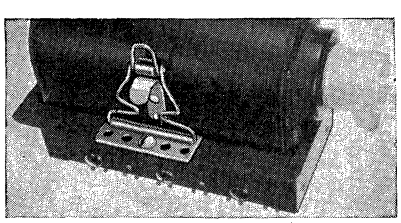
LOCKS FOR 500 SERIES PLUGS AND SOCKETS



Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

SERIES 101 PLUGS

The entire No. 101 Series of Plugs are identical with the exception of the cable ferrule which is furnished in four sizes as listed below. All metal parts are of brass. These Plugs fit all of the No. 101 Series Sockets. Assembly meets Navy Specifications. A low loss Plug and Socket ideal for high frequency connections.

1400 SERIES PLUGS AND SOCKETS

This series of "disconnect" plugs and sockets has the distinct advantage of low cost for a separate unit handling many circuits. Due to exposed metal parts, it is recommended for use when the complete unit is within a housing.

Reduces costs of servicing units. Advantageous in shipping when it is desirable to pack units separately. Polarized—assures correct coupling. Spring temper brass sockets assure perfect contact. Standard units are listed below from 5 to 16 contacts. However we can supply units having as many as 30 or more contacts.

On No. 1420 or larger we recommend the plug be divided into two or more units, as a single long plug is not mechanically strong. The socket will be made in one assembly.

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Terminals and Binder Screws are of brass, nickel plated. **Marker Strips** may be ordered and imprinted to supply terminal designations. These Marker Strips mount beneath Terminal Strips and also afford insulation from metal mounting surface.

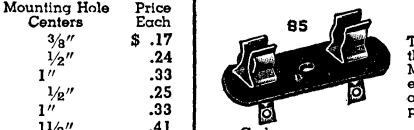
SPECIAL FUSE MOUNTS

No. 84

The No. 84 fuse mount provides solder tab on the same side of the panel as the fuse clips. Mounts No. 3-AG fuses. Similar in design to the No. 801 except that bakelite panel is of special size. Mounting hole in center of panel.

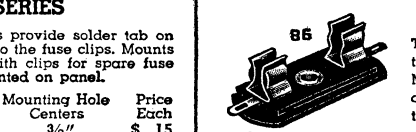
Code		Panel Size	Price Each
No. 84	Single Fuse	3/4"x1 3/8"	$ .20



No. 85

The No. 85 fuse mount provides solder tab on the opposite side of panel to the fuse clips. Mounts No. 3-AG fuses. Similar to No. 901 except that bakelite panel is of special size and shape. Mounting hole in exact center of panel.

Code		Panel Size	Price Each
No. 85	Single Fuse	3/4"x1 3/4"	$ .21



No. 86

The No. 86 fuse mount provides solder tabs on the same side of the panel as the fuse clips. Mounts No. 3-AG fuses. Bakelite strip is anchored to the terminal panel, enabling the fuse to be mounted direct on metal.

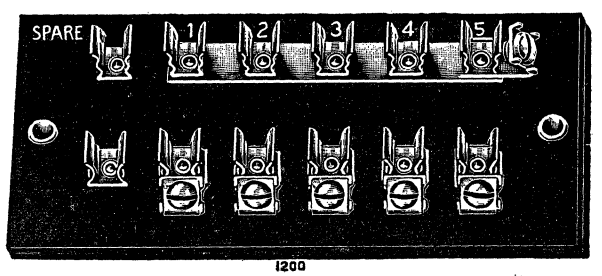
No. 89	7/8"x2 1/2"	$ .38



No. 1200 SERIES MULTIPLE FUSE MOUNT PANELS

The No. 1200 series presents a very convenient fuse panel arrangement for multiple circuits. One side of all the fuse mounts is common, making it convenient for wiring. Screw terminals are provided on the same side of panel as fuse clips. Mounts No. 3-AG fuses. Each panel contains a pair of clips for mounting a spare fuse. The whole assembly has a bakelite insulating plate attached so that it can be mounted directly on metal.

S.S.WHITE FLEXIBLE SHAFTS

FOR RADIO AND ELECTRONIC APPLICATIONS

As basic mechanical elements for the transmission of power and for remote control, S.S.White flexible shafts are widely used in the Radio and Electronic fields. Applications take millions of feet annually. These include aircraft radio and direction finding equipment; automobile, broadcasting and home radios; radar; television, etc. Quality products in every sense of the word, S.S.White shafts have earned through the years, a reputation for efficient, dependable performance.

QUICK FACTS ABOUT S.S.WHITE FLEXIBLE SHAFTS

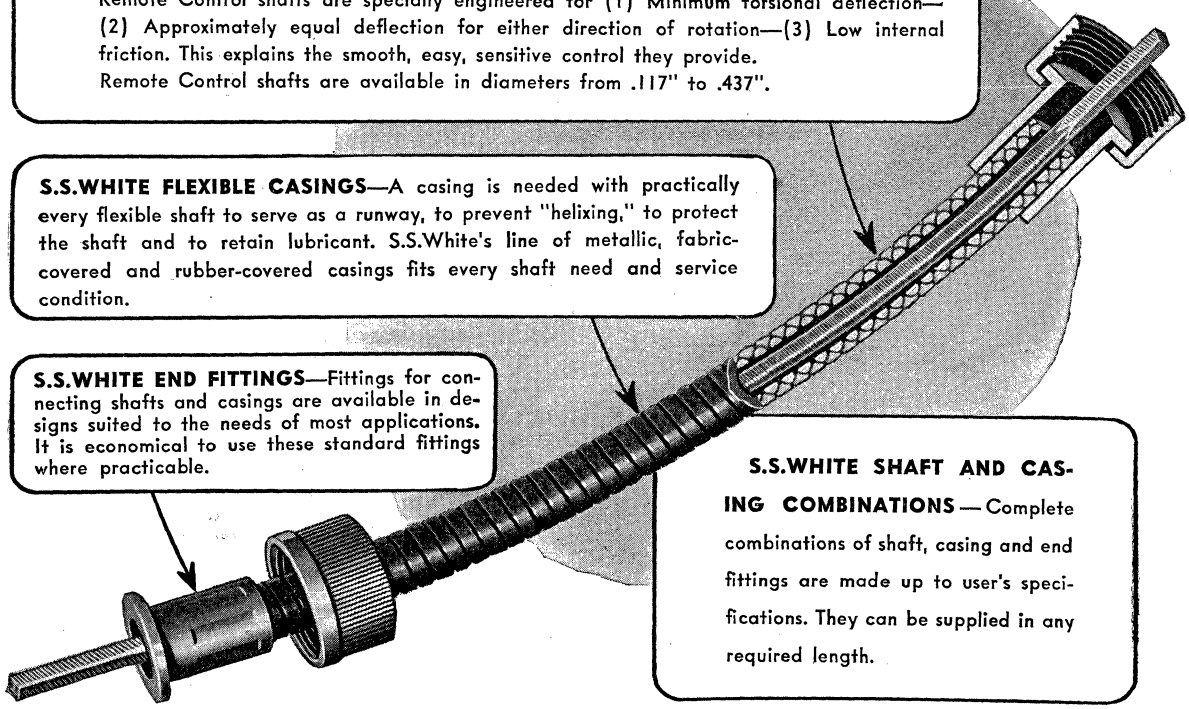
They are made in two classes as follows:

POWER DRIVE —For transmitting rotational power as in driving instruments and other mechanisms from small motors or other power sources. Power Drive shafts are available in diameters from .043" to .750" with a wide selection of physical characteristics.

REMOTE CONTROL—For control of radio and electronic elements requiring rotary adjustment or manipulation from a remote point.
Remote Control shafts are specially engineered for (1) Minimum torsional deflection—(2) Approximately equal deflection for either direction of rotation—(3) Low internal friction. This explains the smooth, easy, sensitive control they provide.
Remote Control shafts are available in diameters from .117" to .437".

S.S.WHITE FLEXIBLE CASINGS—A casing is needed with practically every flexible shaft to serve as a runway, to prevent "helixing," to protect the shaft and to retain lubricant. S.S.White's line of metallic, fabric-covered and rubber-covered casings fits every shaft need and service condition.

S.S.WHITE END FITTINGS—Fittings for connecting shafts and casings are available in designs suited to the needs of most applications. It is economical to use these standard fittings where practicable.



S.S.WHITE SHAFT AND CASING COMBINATIONS — Complete combinations of shaft, casing and end fittings are made up to user's specifications. They can be supplied in any required length.

ENGINEERING COOPERATION

S. S. White engineers have cooperated in working out hundreds of radio and electronic applications. This cooperation is available to all engineers and designers to answer any questions about flexible shafts and to help work out any problem involving the use of flexible shafts. No obligation is entailed and all information is held in strictest confidence.

BULLETIN FOR ENGINEERS

This bulletin gives the basic information and technical data about S.S.White power drive and remote control flexible shafts and their application. Copy mailed on request. Ask for **Bulletin 4501.**

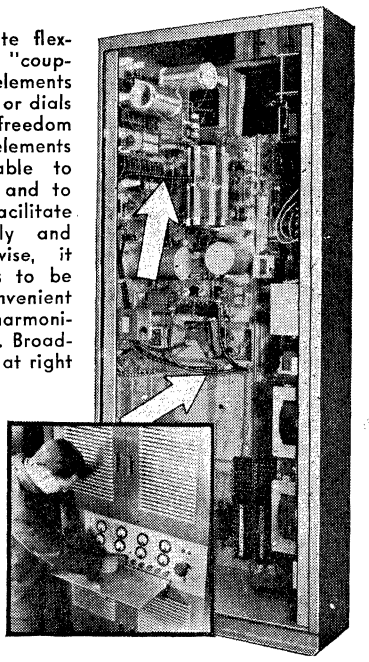
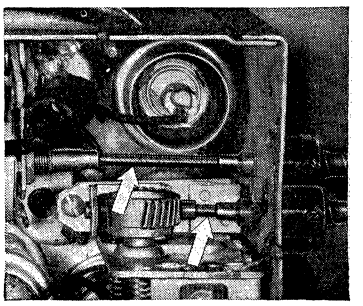
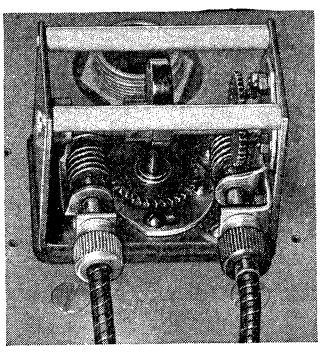
S.S.WHITE FLEXIBLE SHAFTS FOR RADIO AND ELECTRONIC APPLICATIONS

Use of S.S.White flexible shafts for "coupling" variable elements to control knobs or dials gives complete freedom in placing elements wherever desirable to conserve space and to simplify and facilitate wiring, assembly and servicing. Likewise, it permits controls to be placed for convenient operation and harmonious appearance. Broadcast transmitter at right is an example.



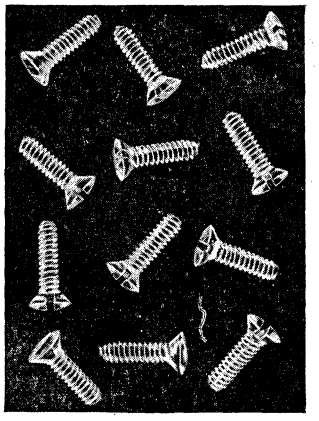
→ Use of short pieces of shafting to couple external control shafts to variable elements—as in the radio receiver at right—damps vibration and eliminates need for precise mounting and alignment—gives complete freedom in locating the controlled elements.





← Gearing is frequently used with flexible shafts to reduce load on the shaft in the case of power drives and to reduce deflection in the case of remote control shafts, particularly where long shafts are called for. At left is the simple geared connection of remote control shafts to an aircraft radio compass loop.

S.S.WHITE PLASTIC PRODUCTS



ASSEMBLY SCREWS—for use where non-metallic screws are desirable. Shown at right—No. 6-32 x 1/2" oval head plastic screws.

HEX. SOCKET HEAD CAP SCREWS—with or without nuts.

DUMMY THREADED PLUGS AND CAPS—for shipping, handling, storage.

BOX TRAYS—Transparent, stackable parts containers.

Bulletins on any of above products mailed on request.

CONTRACT PLASTICS MOLDING

S.S.White offers the most modern facilities plus an experienced organization for INJECTION and COMPRESSION molding and EXTRUDING. Inquiries are invited on specific requirements.

S.S.WHITE MOLDED RESISTORS—THE *"All-Weather"* RESISTORS

Noiseless in operation—Strong and Durable—Good performance in all climates.

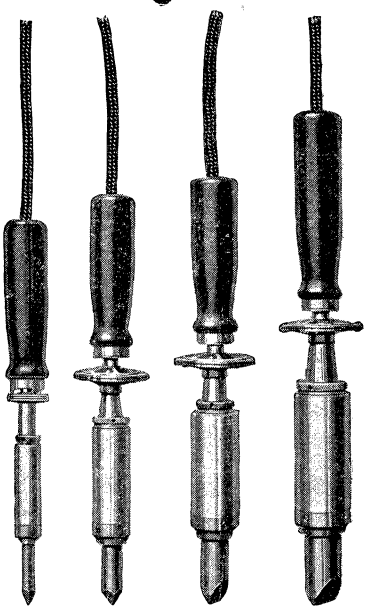
ELECTRIC SOLDERING IRONS

Embodied in these Electric Soldering Irons are those features of construction and design that specialized experience — since 1894 — has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph and radio stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.



RELATIVE SIZES AND SPECIFICATIONS

No. 3138—Primarily adapted for light work—radio, telephone, telegraph, ignition, factory and production work of a light nature; for telephone installation and switchboard work, etc.

No. 3158—For the same purposes as No. 3138 and for work of a heavier nature. Used by electric starter and ignition manufacturers for repair work and other purposes where more heat is needed.

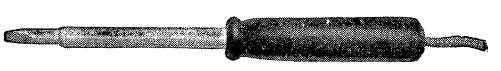
No. 3178—For use on still heavier work; for light commutators and service and production work. A very useful iron for general purposes.

No. 3198—For heavy work of all kinds. Supplies a very large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc.

Each iron is equipped with a baffle plate, at the shank, to prevent free conduction of heat to handle.

Made in all standard voltages and for 32 volts. No. 3138 also made for 12 and 24 volts. All can be equipped with three-conductor cord, one wire grounded, at slight additional charge.

Separate heat-insulating stand supplied with each iron.



No. S-76—A special, light, compact iron designed for light work. It heats up quickly and consumes only 50 watts. Its construction is somewhat different from that of the standard irons, having a specially treated copper core, with light metal head, on which the tip screws with taper fit. An efficient and serviceable tool that will give satisfaction when used on the light work for which it is intended. Made in all standard voltages.

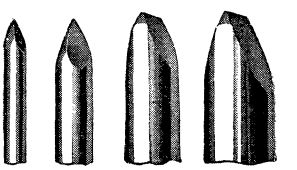
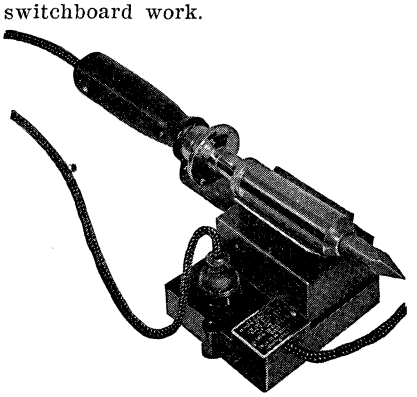
American Beauty COPPER TIPS

These copper tips are made of commercially pure, drawn bar, copper rod. Each tip is designed to fit into and to the full length of core of heating unit of the particular iron for which it is intended. Maximum area of contact between tip and heating unit is thus assured. Tips are of uniform diameter throughout their entire length and are not made with enlarged heads because this does not increase the capacity of a soldering iron. Tip is held in place in core of heating unit by a recessed set-screw. Removal for cleaning or replacement is therefore easy. Standard shaped tips with which the various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a special, long, semi-chisel shaped tip can also be supplied for telephone and switchboard work.





American Beauty TEMPERATURE REGULATING STANDS

For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an electric soldering iron while at rest. When placed on this stand, soldering iron is maintained at working temperature, ready for instant use or, if desired, at a lower temperature. Through an adjustment on bottom of the stand, thermostat may be set for the maintenance of any desired temperature—from very low, or warm, to full working temperature. Body of stand is of molded plastic. Soldering iron cradle proper is of metal. Stand is equipped with cord and attachment plug-cap for connection to current and with a receptacle for connection of the electric soldering iron. It is designed for use with electric soldering irons up to 660 watts capacity and on circuits up to 240 volts.

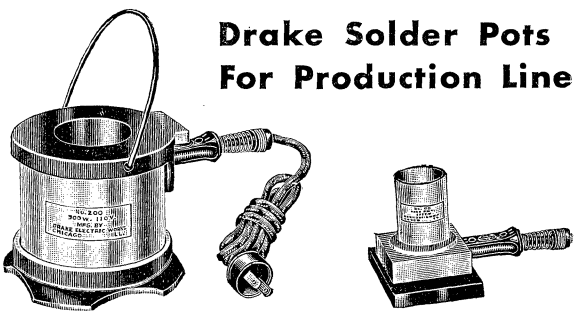
Drake Solder Pots For Production Line



Model No. 200—300 Watt Unit

An ideal electric solder pot for production use. Used in factory production of tinned wire ends, terminal tinning and countless other volume tinning applications. Holds 2 lbs. of bar solder in 2½" diameter 2" deep cast iron well. Complete with detachable Underwriters' Approved cord and plug, and bale type carrying handle. Genuine nichrome element. Shipping weight 6 lbs.

No. 200. List Price $6.39

Model No. 100—150 Watt Unit

Designed for light tinning. Ideal for occasional jobs. Suited especially for tinning ends of stranded wires to prevent fraying. Can also be used for soldering cord tips to cables. One piece cast iron construction holds heat longer. Size of pot 1½" diameter 1" deep. Holds 1 lb. of bar solder. Complete with Underwriters' Approved cord and detachable plug. Shipping weight 3 lbs.

No. 100. List Price $4.79

All Drake Irons are listed as standard with the Underwriters Laboratories and the Canadian Power Commission.

CALROD SOLDERING IRONS

FOR EVERY RADIO REQUIREMENT

● **HIGH-SPEED SOLDERING.** You can solder as fast and continuously as the nature of the work will allow.

● **UNIFORM PERFORMANCE.** Operating characteristics remain constant day after day. No appreciable decrease in efficiency even after months of service.

● **LONG LIFE AND LOW MAINTENANCE.** Long life is assured and over-all costs are kept low because sturdy construction eliminates need of frequent repairs.

● **EASY, LOW-COST REPAIR.** Assembling and disassembling are easy.

● **THEY NEED NOT BE RETURNED TO THE FACTORY FOR REPAIR.** Irons can be repaired on the job without special tools or skill.

ELECTRIC SOLDERING IRONS

GENERAL INFORMATION—Equipped with 6 ft. (10,000 cycle) approved heater cord (covered with twine braid for extra long wear) and rubber plug. European type plugs 25c extra list. Metal stand furnished with each iron. Heating elements made of best grade nickel-chromium resistance wire, insulated with finest mica obtainable. Elements in the plug tip irons are replaceable by the user and in the screw tip irons replaceable at the factory. Tips in all irons are replaceable; made of hard drawn pure copper. Case is made from solid hexagon steel (except No. 50 and P-30), affording it great mechanical strength, preventing denting. Terminal easily accessible and constructed to relieve cord strain. Smooth, cool, comfortable handle—readily replaceable. Voltage ranges 32 to 250. Standard voltages 110/120, 121/130, 220/250. All other voltages $1.00 extra list.

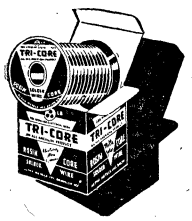
ALPHA SOLDERS

FOR RADIO AND ELECTRICAL WORK • 363 HUDSON AVE., BROOKLYN 1, N. Y.

ROSIN CORE SOLDER ★ TRI-CORE SOLDER ★ ACID CORE SOLDER

TRI-CORE ROSIN FILLED SOLDER WIRE



The unique, improved solder for Radio, Electrical and Automotive work. Bigger volume, better profits for dealers.

Faster, more uniform fluxing: Because the cores are located close to the surface, heat penetrates rapidly to the flux. Result—a continuous, free flow of high-grade, non-corrosive pure rosin flux goes on the work before the solder melts.

Continuity of flux: TRI-CORE'S arrangement of three independently filled cores eliminates the risk of empty flux sections in the core.

More Economical: Because TRI-CORE'S solder walls are thinner, the solder melts faster—giving the results expected of a higher tin content alloy.

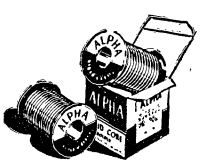
TRI-CORE . . . The Modern Solder . . . is especially recommended for Radio, Electrical, Telephone, Telegraph, Ignition applications, including HF and UHF circuits, Terminals, Coil and socket lugs, Relays, Condensers and similar components.

Manufactured of Virgin tin and lead, TRI-CORE solder mixtures are certified to meet ASTM (Class A) specifications.

Grade 40/60, Diam. .081. Stocked all gauges — 1/4" and heavier, down to .020" and finer. Available in 1 lb., 5 lb., and 20 lb. spools. Quick Selling Counter Display Carton Offers 12 Handy Size Spools.

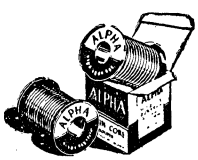
ALPHA ACID CORE SOLDER

Quick acting Alpha Solder makes a secure, tight bond. Alpha gives you a permanent bond, avoids waste, and completes more soldering jobs per spool. Pure Virgin metals and a correct flux assures uniform, superior soldering results.



ALPHA ROSIN CORE SOLDER

High-grade, non-corrosive plasticized rosin is the reason for this Alpha product being widely favored on Electrical, Automotive electrical, Radio, Radar, and similar jobs. It makes cleaner, stronger joints without toxic or offensive odors.

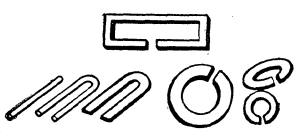


ALPHA SOLID SOLDER WIRE

Alpha manufacturing methods insure a homogeneous solder wire that is perfectly smooth and accurate in gauge through its entire length. Its smooth flow gives you a solid, permanent joint. Available in any specified composition and size.

ALPHA PREFORMS

Include washers, cut shapes, drops and pellets, solder foil and other special forms used extensively in repetitive manual and automatic soldering processes. Increased production, savings of materials and labor, plus accurate control, can be effected where shapes cut to the particular application are employed.



STANDARD ALLOYS

TRI-CORE and ALPHA SOLDERS 40/60. Also available in 25/75—30/70—35/65 45/55—50/50—55/45 60/40.

ALPHA SOLID SOLDER WIRE: All alloy ratios available to order.

STANDARD DIAMETERS

TRI-CORE: .081.
ALPHA: (Rosin) .093
(Acid) .125
ALPHA SOLID: .125.
Also available on special order in the following diameters: .093, .081, .072, .062, .050, .045, .040, .032.

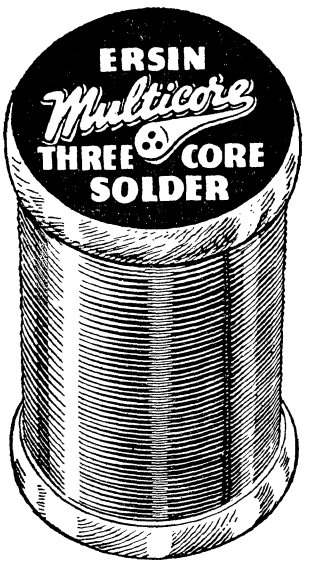
ERSIN MULTICORE SOLDER



SEVEN POUND REELS

ONE POUND CARTONS

Our claim is a simple one: We believe that ERSIN MULTICORE is the finest cored solder in the World!

Ersin Multicore is solder in the form of wire containing three cores of non-corrosive Ersin Resin Flux. No extra flux is required. The use of Ersin Multicore guarantees that the correct proportion of flux to solder is used and maximum fluxing action occurs at the correct melting point of the solder. Only by using solder wire with three cores of flux is it possible to be sure the flux is always present—that there will not be lengths of wire without flux which result in "dry" or high-resistance joints.

In addition to this advantage, Ersin Multicore is the *only* cored solder in the world containing ERSIN, an extra-active non-corrosive flux. It is high grade rosin homogeneously activated by a process which confers on the rosin the vigorous fluxing action characteristic of the more active fluxes.

You enjoy speedy and a consistently high precision standard of soldering and attain just that extra rapidity which guarantees economy of operation. Ersin Flux not only removes surface oxides prior to soldering, but prevents formation during the soldering period. You can satisfactorily solder components which are highly oxidized—ones on which it would be necessary to undertake additional mechanical or chemical cleansing processes when using any other type of flux.

In Ersin Flux, the protective qualities of the original rosin are preserved. Joints made with Ersin Multicore Solder will not corrode even after prolonged exposure to any degree of humidity. The flux residue is impervious to moisture. It is hard and not sticky. It avoids accumulation of dirt and impurities on the joint.

Every reel or carton of Ersin Multicore is clearly marked both as to Gauge and Alloy, showing the actual content of Tin and Lead. You know exactly what you are getting when you buy Ersin Multicore Solder! Multicore costs a fraction more initially, but is unquestionably most economical in the long run.

Ersin Multicore Solder is available in all Tin/Lead alloys and in standard wire gauge from 10 to 22. (14, 16 and 18 s.w.g. are most popular.)

Ersin Multicore is the only solder which offers you these two fundamental advantages: (1) Multicore construction, providing three cores which assure perfect joints; (2) Ersin Flux, our *exclusive* fast non-corrosive flux.

Ersin Multicore is the answer for those who seek the finest Cored Solder in the World!

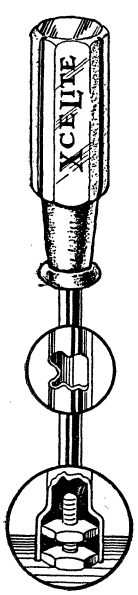
HOLLOW SHAFT NUT DRIVERS

(Fire Resistant Handles)



This unique, time-saving tool was especially designed for general electrical and radio work. In radio, it is primarily useful in installing and removing volume control and other panel equipment. The nut is readily lightened or loosened without damage to the panel. On telephone or power switchboards, the Hollow Shaft Nut Driver is especially useful where nuts must be installed or removed over long protruding bolts or studs — made with or without insulated shafts. The former for use with high voltage work. Shafts insulated for protection up to 1000 volts; handles to 5000 volts.

STUBBY TYPE

XCELITE "Combination Detachable" SCREWDRIVER

Here's convenience — and saving — combined in a mighty unique and useful tool. The XCELITE Combination Detachable Screwdriver has a genuine XceLite Shockless Handle, hollow to receive the dual-blade screwdriver units listed below. With this practical XceLite handle and, for example, a No. 2 Phillips blade on one end and a ¼" XceLite blade on the other, you have **two** screwdrivers for just about the price of one! What's more, you can buy blades of other sizes to fit the same handle. Note the unique ball fastener on the blade. This holds the screwdriver unit securely in place—yet readily slips out when desired.

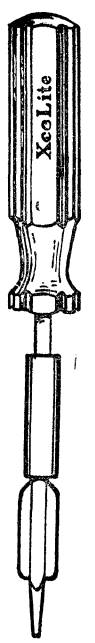
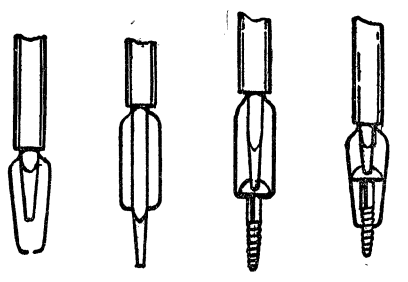
SCREW-HOLDING SCREWDRIVER





The XceLite Screw-Holding Screw Driver is a tool for which electricians, radio men and mechanics everywhere have long searched. It is a genuine XceLite product with a unique attachment that instantly and rigidly holds and starts **any** screw, even one without a head. Spring holder remains in place either above, below or exactly at the driver point. Grasps the screw at the head or ⅜" below giving three point suspension for greater rigidity. Can also be used for removing screws. Comes in ⅛" square blade, 3", 4" and 5". Packed 12 assorted lengths on metal display.

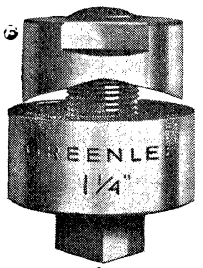
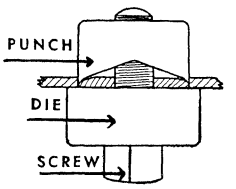
RADIO CHASSIS PUNCHES

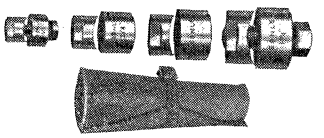
KNOCKOUT PUNCHES AND CUTTERS



No. 730 RADIO CHASSIS PUNCH

Quickly cuts clean, accurate holes in radio chassis for sockets, plugs, and other receptacles. Operates simply with ordinary wrench for drive power. Just insert the punch in a ⅜-inch or $\frac{13}{32}$-inch drilled hole and turn the drive nut. No reaming or filing—hole is smooth, perfect. Each size tool consists of the punch for cutting the metal, the die for supporting the metal, and the cap screw for providing the drive action. All parts are of high-grade tool steel carefully heat-treated and ground for clearance. Individually packed in a tube container and furnished complete with operating instructions. Odd-size holes for meters can be made with other punches and cutters listed at right.



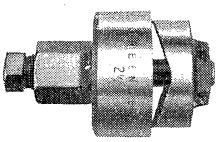


No. 735 KNOCKOUT PUNCH SET

For fast, easy cutting of holes in metal up to ⅛-inch or 10-gauge thickness. Insert in small opening and drive with an ordinary wrench. Speeds radio set work, cuts cleanly, no reaming and filing. Set includes four punches for making ⅞, $1\frac{3}{32}$, $1\frac{11}{32}$, $1\frac{11}{16}$ inch holes. Packed in leather case.

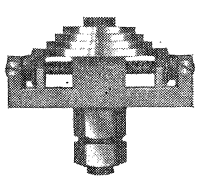
No. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of two punches . . . for cutting holes $1\frac{15}{16}$ and 2⅜ inch diameter. Packed in leather case.



Nos. 738 and 739 KNOCKOUTS PUNCHES

For cutting holes 2⅞ inch diameter (No. 738) and 3½ inch diameter (No. 739) in metal up to ⅛ inch or 10 gauge thickness. Similar in design and operation to that of smaller GREENLEE Knockout Punches. Packed and sold individually.



No. 740 KNOCKOUT CUTTER

Excellent tool for making meter openings and other large holes needed in radio work. Quickly cuts holes $1\frac{15}{16}$, 2⅜, 2⅞, 3½-diameter. Operation is simple . . . driven with ordinary wrench. Special discs can be furnished for cutting odd-size holes from $1\frac{15}{16}$ to 3½-inch diameter. Packed in leather case.

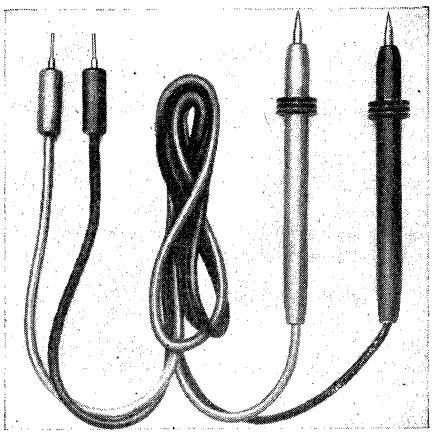
TEST LEADS AND ACCESSORIES

REINER "15000" VOLT HEAVY DUTY TEST LEADS

Invaluable for all Engineers working on High Tension Circuits



"HIGH VOLTAGE SAFETY FIRST"

Reiner "Scientific" High Voltage Test Leads are designed and manufactured for use up to 15000 volts with a good safety factor. Attractive in appearance, with the highest quality of materials and construction. Combination thumb rests and long path leakage barriers. Pair consists of black lead with black handles and red lead with red handles. Special construction prevents wire from pulling out through prod handlels.

Other features include

- Heavy Duty Kinkless Leads
- Negligible Voltage Drop
- 7″ Prod Length—Heavy Duty Type
- Insulated Handles on Tips
- Heavy Duty Hardened Steel Prod Points
- Triple Barrier Leakage Guard
- Length 54 Inches

No. 910—Individually Boxed; Distributors Standard Package, 25 prs. List price per pair **$4.95**

No. 920—Signal Tracing Type Probe with built-in resistor; otherwise identical to No. 910. List Price each..... **$6.00**

REINER SCIENTIFIC PENCIL TYPE TEST LEADS

All Reiner "Scientific" Test Leads have attractive 5½″ pencil-type prod handles which permit entering into tight places. These prod handles are of the finest quality material with extremely high voltage insulation, low moisture absorption, low power factor and surface leakage. The handles are scived to permit a secure finger grip and minimize slippage.

Prod points are made of hardened steel. They will not become dull or wear out easily. A hardened steel point prevents bending which so frequently occurs with brass points.

Test lead wires are extra heavy kinkless multistrand flexible wires insulated for 6000 volts—one red wire lead and one black, with uniform good color quality.

No. 904—"De Luxe" Scientific Test Leads have red and black handles with the sciving filled in white. Length 72″. Insulated tip handles at the tip end. Threaded brass prod sleeves and brass tip pins.

No. 903—Scientific Test Leads are 54″ long; no white filling at the sciving; otherwise identical to No. 904.

No. 901—Scientific Test Leads are 48″ long; plain insulated tips; otherwise identical to No. 903.

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt.

If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread, it will be our "circumference around pulleys." In measuring belts always remember that the **circumference around pulleys** is not the same as **stretched out or cut length.** A belt when cut, develops approximately 3/16" extra length when stretched out, depending on thickness of belt.

Help The Radio Man

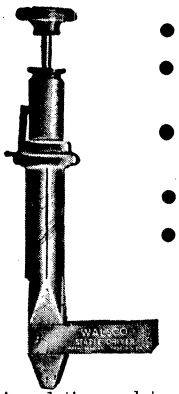
WALTER L. SCHOTT COMPANY, BEVERLY HILLS, CALIFORNIA

STAPLE DRIVER — CHECK-O-VOLT — ALIGNMENT TOOLS —

WALSCO STAPLE DRIVER

PATENT No. 2285384

PAYS FOR ITSELF ON THE FIRST JOB



- TRIGGER CONTROL FEED
- CAN BE REGULATED FOR DRIVING DEPTH
- STAPLES COLORED TO MATCH WIRE
- RELOADS IN 10 SECONDS
- FOR USE BY RADIOMEN, SOUNDMEN, TELEPHONE AND BURGLAR ALARM COMPANIES, ELECTRICIANS AND FOR GENERAL STAPLING.

A real time and trouble-saving tool for stapling wire into corners, into moldings, behind pipes, and on to hard surfaces, such as plaster, cement, and even soft concrete. For Radio, Public Address, and Inter-Communication installation and service. Useful also for general stapling, sign-posting, refrigeration gasket work, etc. The WALSCO Staple driver has met the test in the field and has proved itself a real aid to maintenance men. This handy device automatically positions the staple—then one or two strokes with the palm of the hand and the staple is driven home neatly, quickly, and accurately. A small trigger regulates the feeding mechanism to enable the operator to strike the handle on hard surfaces as often as necessary before a second staple leaves the magazine. Staples come in strips, can be loaded in a few seconds and are large enough for cables and wires up to ¼" diameter. An adjustable regulator controls the depth to which the staple is driven into surface, thus preventing damage to the insulation of the wire.

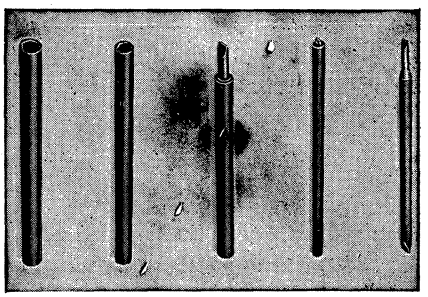
WALSCO ALIGNMENT TOOLS



1 2 3 4 5

These tools have won wide acceptance among radio men everywhere. They are precision made of the highest quality materials. Indispensable for work bench or tool kit. With a set of these tools the radio technician has the proper instruments to align almost any set.

Most of the tools are available either in sturdy bone fibre or in special Polystyrene plastic. The fibre tools are tougher than the plastic tools and are recommended for alignment of broadcast and intermediate band circuits, whereas the Polystyrene tools are for adjustments on high and ultra-high frequency circuits. Polystyrene is recognized by the radio profession as one of the finest low-loss insulating materials available today. Definitely needed on FM and television sets.

WALSCO ¼" HEX I. D. NEUTRALIZING WRENCH.

This tool is very durable and can be cut if corners become rounded from wear as the internal hex shape extends through the entire length. Overall length—7½", O. D.—⅜" round.

CEMENTS—SOLVENTS
COIL DOPE

WALSCO RADIO CEMENT

Vibration-Proof **Heat Resisting**
Unsurpassed Adhesive Power

An elastic cement especially made for the manufacture and repairing of speakers and for general radio work. Unaffected by vibration, dries fast and will never become brittle with age. • The latest developments in synthetic resins and gums are incorporated in Walsco Radio Cement.

• In addition to its use for speaker repair, Walsco Radio Cement can be used for repairing cabinets, loose tube bases, grid caps, etc. It will provide a strong bond between almost any materials and is not affected by high temperature, moisture or oil. All bottles come with built-in brush and have an evaporation-proof cap liner.

Cat. No.		List Price

WALSCO VINYLITE CEMENT

This adhesive uses the new Vinylite plastic resin as a base and has remarkable properties such as high tackiness, extreme flexibility when dry and excellent adhesion to metals, plastics, leather, cardboard and paper. Fast drying. Also an excellent thermoplastic cement for joining nonporous materials (e.g. metals). In this case the cement is applied to both surfaces and dried after which the parts are pressed together and bond established by heating with flatiron, soldering iron, etc.

Cat. No.		List Price
25	2 oz. bottle	$0.70

WALSCO RUBBER CEMENT

For cementing rubber parts to metal or wood, rubber mounts to chassis, rubber cushions to lids, etc.—gives an especially strong bond. A Radio Serviceman should always have a bottle on his work bench.

Cat. No.		List Price
112	2 oz. bottle	$0.55
114	4 oz. bottle	.95

WALSCO FABRIC CEMENT

Does Not Penetrate the Fabric

Especially made for attaching grille cloth, turntable felt, covering of portable radios, etc. Dries very fast; is unaffected by moisture, sunlight, and high temperature and does not become brittle. Indispensable to Radio Dealers and Servicemen—eliminates the danger of spoiling the outside of a grille cloth, turntable felt, or other fabrics, since it does not penetrate the material.

Cat. No.		List Price
21	1¾ oz tube	$0.45

WALSCOBOND

A truly universal cement. Fast drying and easy to use. Bonds practically every material except rubber. Excellent as model airplane and general household cement. Has exceptional adhesiveness and strength. Not affected by heat and cold. Water, oil- and alcohol-proof.

CLEANERS — LUBRICANTS "CONTACTENE"—"NO SLIP"

WALSCOLUB - B

A recently-developed chemical compound in thin paste form. WALSCOLUB - B counteracts oxidation, prevents corrosion of metals and eliminates noise on band switches, push buttons, tuners, volume and other controls, as well as air-exposed electrical contacts, attenuators, etc. WALSCOLUB-B will not change electrical properties. It is superior to any graphite compound or liquid dope for this purpose. Ideal on metal surfaces to prevent rust. Servicemen: Its use will save you both time and money. Once you have tried it, you will never be without it! Large, handy applicator tube.

Available also in 1-lb., 5-lb. and 25-lb. containers for industrial users. Prices on request.

Cat. No.		List Price

WALSCO CONTACTENE

New Improved "Contact Cleaning Fluid"

- Cleans contacts and controls.
- Keeps controls and contacts noise-free.
- Lubricates and reduces friction.

A fast-evaporating combination of special solvents affording greatest cleaning power without affecting insulating materials. Contains liquified Walscolub B, which after evaporation of the solvents, forms a thin film that protects the contacts. Contactene is highly recommended for treating volume controls, band switches, tuning condensers, springs, etc., to eliminate noisy operation. Bottles come with built-in brushes.

WALSCO CEMENT AND SOLVENT KIT

A handy kit, easy to carry in the tool box. Contains one 2-oz. bottle of Radio Cement and one 1-oz. bottle of Cement-Solvent-and-Thinner. One brush is built in the cement bottle cap. Extra brush is included. The most economical package for the servicemen and amateurs who do only occasional speaker repair work.

Cat. No. K-19 ..... **List Price $0.75**

WALSCO COIL DOPE KIT

A handy kit containing one 2-oz. bottle of Polystyrene Cement and Coil Dope, and one 1-oz. bottle of Special Thinner. Two brushes are included. Polystyrene Cement is non-hygroscopic; and due to its low-loss factor, ideal for use on high frequency work. It insures the highest stability in receivers and other electronic devices. It does not affect the electrical characteristics of coil winding. This kit is made for amateurs and experimenters who use only small quantities. **Cat. No. K-21**.....**List Price $0.75**

WALSCOFLUX

A non-corrosive flux. Quick acting, easy to apply. May be safely used for all electrical, radio and telephone work. Helps to keep the iron tip clean.

WALSCO RECORD-EASE

Recording—With the Greatest of Ease

Record-Ease should be applied to all recording and transcription blanks BEFORE the cutting. It makes the shavings "fluffy" as they pile up in the center of the record and thereby prevents interference with the cutting point. By decreasing cutting-point friction, Record-Ease greatly prolongs the life of cutting needles. Indispensable for commercial recordings, schools, police and court recordings, broadcasting stations and home recordings.

Cat. No. 95—2 oz. bottle ..... List Price $0.65

WALSCO LIGHT BULB COLORING

A transparent, heat and moisture-resisting dipping lacquer especially made for coloring bulbs such as used in radio dials, signal systems, auto dash lights, and fancy illumination. Big jars permit dipping of even larger bulbs.

A WORD ABOUT WALSCO REFINISHING AND REPAIR KITS

These are the only kits on the market with all lacquers, stains and enamels specially prepared, ready mixed and soluble in alcohol. They have four outstanding advantages.

1. Drying time is reduced to approximately one-half.
2. The original finish of the cabinet cannot be lifted, as in the case of improperly applied ordinary lacquers.
3. An unsatisfactory patch can be washed off and the work started again.
4. No special thinners are required. Thinning, washing out brushes, etc., can be done with alcohol readily obtainable anywhere.

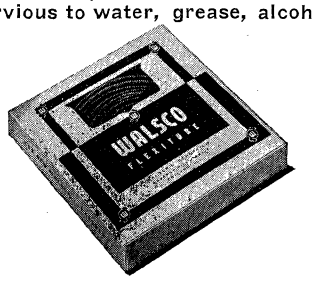
WALSCO INSULATING TUBING (SPAGHETTI)

WALSCO offers two of the finest types of insulating tubing for the electrical and electronic field. The use of "RAYOFLEX" is advantageous wherever heat is present at the time of application or during operation (e.g. where soldering is performed near the tubing or where heat is generated by resistors, etc) "FLEXITUBE" is superior in all electric and many mechanical respects but is not recommended for use where temperatures exceed 185°F (85°C). This tubing is impervious to water, grease, alcohol, hydro-carbons, alkalis and acids.

WALSCO RAYOFLEX

A new type spaghetti tubing" made of heavily lacquered rayon braid. Much more flexible than the conventional varnished tubing, good dielectric strength (4,000 to 5,000 volts). The materials used in the manufacture of this tubing are the latest developments in plastic lacquers and the new rayon braid gives RAYOFLEX a smooth and tough surface inside and out. Meets ASTM and VTA Specifications #B2. Sizes up to #6 are packed in handy boxes.



WALSCO FLEXITUBE

A high grade synthetic tubing for electronic and electrical insulation. Extremely flexible and resistant to abrasion. High dielectric strength (average 12,000 volt.) Resistant to cold or heat from minus 65° F to plus 185°F. (Minus 54°C to 85°C). This new synthetic tubing is ideally suited for insulation purposes in radio and communication assemblies. Attractively packaged in individual boxes. Easy to store. Usable to the last inch.

METHOD OF DETERMINING REQUIRED BELT LENGTHS

If the WALSCO BELT SIZE FINDER is not available to determine the proper length of replacement belt required, proceeed as follows: Take a thin thread and place it around pulleys. The stretched out length of this thread equals "the circumference around pulleys." If the old belt is available, cut open and measure the "cut length." Select proper WALSCO belt from above table.

WALSCO DIAL CABLES AND CORDS

WALSCO Dial Cables and Cords are manufactured to meet the most rigid standards of the Government, Radio Industry and Engineering Laboratories. The finest raw materials are used and production is controlled to supply a uniform product with an absolute minimum stretch factor. All standard Cords are made with **NYLON** braid, known to have the highest abrasion resistance. These selected materials, plus special chemical treatment after fabrication, make WALSCO Cords the finest on the market. WALSCO Dial Cords are used by leading manufacturers as a standard component.

WALSCO PLASTIC DIAL CRYSTALS

The New Universal, Unbreakable Crystal, Available in Round and Flat Styles

This innovation in replacement crystal design makes it possible to use one basic crystal to fit any dial. A special template supplied with each crystal is used to cut a circle of any desired diameter, using ordinary scissors. The crystal is made of unbreakable plastic and has the further advantage over glass that it can be cemented firmly in place. Can be used for radio dials, clocks, instruments, dash board dials, etc.

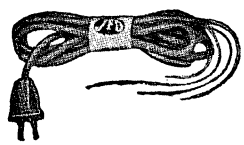
TAPPED 4 TERMINAL AC-DC RESISTANCE CORDS

Pilot light resistor shunt built into the line cord. Used on Emerson, Zenith, Sparton, R. C. A., General Electric, Wells-Gardner, Sears Roebuck, Fada, Admiral, Air King, Detrola, Crosley, Garod, and others.



No. — List, Ea.

2176—160 OHMS—TAPPED AT 24 OHMS
For sets using tubes having a voltage drop of approximately 69 volts as 2-25 volt tubes and 3-6.3 volt tubes plus single pilot light or similar combination $1.38

2195—165 OHMS—TAPPED AT 30 OHMS
There is a large demand for this tapped line cord 1.38

2177—180 OHMS—TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 63 volts as 2-25 volt tubes and 2-6.3 volt tubes plus a single pilot light or similar combination 1.38

2178—200 OHMS—TAPPED AT 25 OHMS
For sets using tubes having a voltage drop of approximately 57 volts as 1-25 volt tube, 1-12 volt tube and 3-6.3 volt tubes and a single pilot light. May also be used for sets using tubes having a voltage drop of 63 volts, (2-25 volt and 2-6.3 volt tubes) if high line voltage (125 volts) is encountered.... 1.38

2179—200 OHMS—TAPPED AT 40 OHMS
For sets using tubes having a voltage drop of approximately 57 volts as 1-25 volt tube, 1-12 volt tube and 3-6.3 volt tubes and two pilot lights in series 1.38

No. — List, Ea.

2174—280 OHMS—TAPPED AT 40 OHMS
For sets using tubes having a voltage drop of approximately 32 volts as 2-12 volt tubes and 1-6.3 volt tube or 5-6.3 volt tubes or similar combinations using 2 pilot light in series $1.38

2164—360 OHMS—TAPPED AT 80 OHMS
Used in Garod Model BP-20. See No. 2196 for specifications 1.72

2166—430 OHMS—TAPPED AT 80 OHMS
For Farnsworth Model CD59. See No. 2196 for specifications 1.72

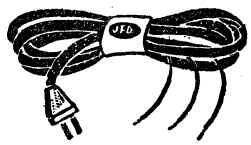
2156—510 OHMS—TAPPED AT 80 OHMS
For Fada. See No. 2196 for specifications 1.72

2196—560 OHMS—TAPPED AT 80 OHMS
Tapped at 80 ohms for plate of rectifier. Designed with voltage dropping resistor to plate of rectifier. Avoids necessity of using B+ resistor. This cord used extensively 1.72

2158—960 OHMS—TAPPED AT 80 OHMS
For G. E. Model L622. See No. 2196 for specifications 1.72

2165—1950 OHMS—TAPPED AT 360 OHMS
Used extensively in sets such as Crosley Model 27BD, Admiral Model 28-G-5, and other sets with similar circuits 2.06

HIGH RESISTANCE CORDS



No. — List Price

2197 For 3-way portable radios. AC-DC battery. New high resistance type cord, has 560 ohms resistance. Many thousands of sets using this identical cord are now in use. This popular replacement cord should be stocked by every serviceman! Individually packaged $1.72

2157—For AC-DC Sets.
This cord has 960 ohms resistance, and is used wherever 45Z3 rectifier tube is employed. (For pocket type radios, such as: Admiral, Fada Sentinel, Sonora, Motorola, Detrola. Farnsworth, etc.) Individually packaged 1.72

REPLACEMENT LINE CORD FOR MOTOROLA SETS

No. — List Price

JFD AUTO MOTOR SPARK NOISE SUPPRESSORS AND CONDENSERS

Maximum efficiency for both radio and motor is insured by the use of JFD Suppressors. They are designed with long resistors, minimum capacity and have the best possible ratio of RF to DC resistance. Adequate noise suppression is given by a resistance of only 10,000 ohms and with this low DC resistance, full motor efficiency is assured. Very strong mechanically, they will withstand high voltage, vibration, heat and every weather condition.

With the exception of the Ford special, which has a resistance of 200,000 ohms, the standard resistance is 10,000 ohms.

JFD "GLOVE FIT" TUBE SHIELDS-New ST-12 Bulb Series

A new, improved type of tube shield assembly that fits the tube "like a glove." The body of the shield is composed of two identical half shields which slightly overlap to insure complete enclosure. When the two half shields are fitted to the tube, they can easily be slipped into the base. The half shields are then pressed together near the top and the cap snapped on. The shoulder of the bulb acts as a pivot and the halves are forced outward at the bottom, tightening the shield in the base. This insures positive contact between shield and base, and also tends to hold tube tightly in socket. Especially desirable for auto and portable radios. Caps, bodies and bases can be used interchangeably.

For Tubes with Short ST-12 Body

Assembly consists of four pieces as illustrated at left: two identical half-shields each 3 5/16" long, together with high cap for tubes with top grid, plus base for wafer sockets, having slotted mounting holes 1½ to 1 27/32" center to center. Suitable for following tubes:

1A4	2A6	6A8G	6K5G	85
1A6	2A7	6B8G	6K7G	6Q7G
1B4	2B7	6D8G	6L7G	6R7G

JFD
Adapter Harnesses and Battery Plugs

For Portable and Farm BATTERY OPERATED RADIO SETS

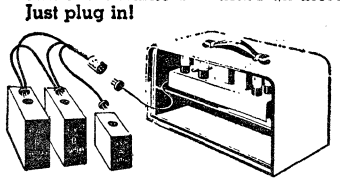
A Successful Solution To An Urgent Problem!

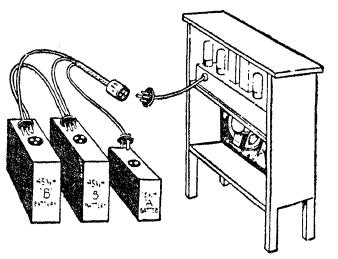
More than 750,000 Harnesses Sold

Combination "AB" Battery Packs are still difficult to obtain—but SEPARATE, standard "A" and "B" Batteries, ARE available, and are in fact now being produced for the portable and farm radio market.

In practically every case, a radio set designed to use a combination "AB" pack can now be adapted to use separate "A" and "B" batteries by means of one of the JFD ADAPTER HARNESSES listed in these pages.

Simply attach the JFD Adapter harness to the battery cable in the radio set — then attach separate "A" and "B" batteries to the plugs at the other end of the harness — that's all there is to it! No soldering — No cutting — Just plug in!

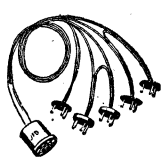




★ **IT'S MORE ECONOMICAL to replace separate "A" or "B" batteries as required, rather than to replace an entire "AB" pack when only one section of it is exhausted.**

★ **IT'S EASIER to get separate "A" and "B" batteries.** Battery manufacturers are now making them in increasing quantities, to supply the important portable and farm-radio market.

★ **IT'S MORE PROFITABLE** to battery dealers, because it simplifies the battery stock problem. Two types of "A" batteries and three types of "B" batteries take care of practically all battery radio sets, in conjunction with JFD ADAPTER HARNESSES. To do the same job with combination "AB" packs, at least 25 different types would be required.

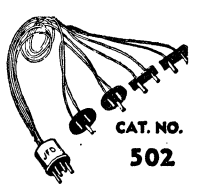


JFD "PHILCO" HARNESS
with 7-prong socket

This harness has a standard 7-prong socket, to fit plug from radio set. Other end of harness has five plugs for 3-45V "B" and 2-4½V "C" batteries.

For use in replacing power pack in Philco models 37-33, 37-38, 38-33, and 38-38 with standard separate "B" and "C" batteries. This means a real saving to the user, since it permits replacement of only the individual batteries as needed instead of the entire pack. Harness is sufficiently long to allow placing batteries on floor near set, if necessary.

No. 513.....List Price ea. $2.74



ADAPTER HARNESS

For sets Using 9V "A" & 90V "B"

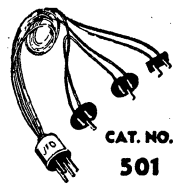
With this harness you can now use separate standard "A" and "B" radio batteries in portable radio sets which employ the following "AB" packs:

Burgess G6B60
Usalite AB-677
Zenith Z-985

This harness has standard 4-prong plug which fits receptacle on radio battery cable. At the other end of the adapter harness are two 3-prong male "B" plugs and two 2-prong male "A" plugs, for use with:
2 45V "B" bat. (Eveready 482, etc.)
2 4½V "A" bat. (Eveready 746, etc.)

No. 502.....List Price ea. $1.64

ADAPTER HARNESSES
For Portable Radio Batteries
NO SOLDERING – NO CUTTING – JUST PLUG IN!



ADAPTER HARNESS

For Sets Using 6V "A" & 75V "B"

This harness permits use of separate standard "A" and "B" radio batteries in portable radios which use the following "AB" packs:

Burgess G4B50
General Z50B4H4
Montgomery Ward 5045
Usalite AB-670
Zenith Z-675

This harness has a 4-prong plug which fits into female receptacle on the end of the radio set cable. At the other end of the adapter harness are two 3-prong male "B" plugs and one 2-prong male "A" plug for use with:
2 45V "B" bat. (Eveready 482, etc.)
1 6V "A" bat. (Eveready 747, etc.)

NOTE A—This is for a candid size radio. Use of a No. 950 Eveready Flashlite Cell and No. 467 Eveready "B" battery, or equivalent, is recommended.

NOTE B—Original "B" Voltage for this set is approximately 75V. However, 90V "B" voltage can be used without difficulty.

NOTE C—No. 504-A harness is for use with one 7½-volt "A" battery (and two 45-volt "B" batteries). Where no 7½-volt battery is available, use No. 504 harness which employs two 4½-volt "A" batteries, to accomplish same result.

NOTE D—These packs are for 1½ volt Farm Radios, not portable type sets; therefore, use of larger (standard) batteries is recommended.

NOTE E—These packs employ three separate sockets. Sets using this type of pack already have three separate battery connection leads, and require no adapter harness.

JFD PRECISION MADE DIAL BELT MANUAL

BELT SPECIFICATIONS—NUMERICAL LISTING

INSTRUCTIONS FOR MEASURING BELTS

In order to determine the size of a belt, if the old belt is available, cut this belt and measure its length when stretched out. This will give you the "Length When Open".

If the old belt is not available or cannot be measured because of its worn condition, stretch a thin thread around the belt pulleys within the set. The measurement of this thread will give you the "INSIDE PULLEY CIRCUMFERENCE". This is not to be confused with the "LENGTH WHEN OPEN". The belt when cut will be approximately 3/16" longer when stretched out.

JFD PRECISION MADE

F-M and Television Aerials

A WORD ABOUT JFD FM AND TELEVISION ANTENNAS . . .

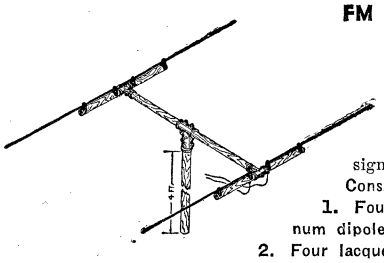
JFD Antennas are made for easy installation by the average person. These antennas will give maximum reception efficiency for the band for which it is intended. They are, in our opinion, the finest antennas that modern radio engineering has devised.

FEATURES OF ALL JFD FM and TELEVISION ANTENNAS:

1. Elements are of ⅜" diameter rigid aluminum tubing.
2. Elements are supported by stand-off bakelite insulators to prevent sagging.
3. Light-weight and strong.
4. Lacquer impregnated hardwood poles.
5. Solid cast aluminum joint brackets.
6. Well built and all-around sturdy construction to withstand all weather conditions.
7. Correct and up-to-date engineering design.
8. All come complete with all necessary insulators, hardware, and instructions.

JFD STANDARD DIPOLE WITH REFLECTOR

FM and Television Antenna



Combination dipole and reflector assembly for difficult locations where signal strength is low. Consists of:

1. Four ⅜" gauge aluminum dipole rods.
2. Four lacquer impregnated hardwood poles.
3. Aluminum angle joint brackets.
4. All necessary insulators, hardware, and instructions.

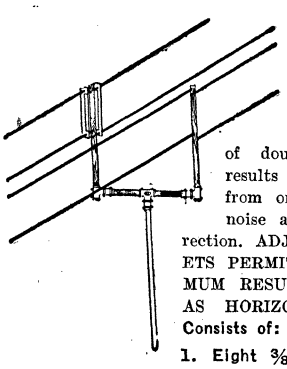
ADJUSTABLE ANGLE JOINT BRACKETS PERMIT TILTING OF DIPOLE IN VERTICAL PLANE, FOR MAXIMUM RECEPTION OF BOTH VERTICAL AND HORIZONTAL POLARIZED SIGNALS.

No. TA-3—Standard dipole assembly with reflector, as illustrated, complete with all necessary accessories.....List Price $15.00

No. TA-3L—Same as above with 75 ft. twin-lead wire. List Price $18.50

JFD DOUBLE DIPOLE WITH DOUBLE REFLECTORS

F-M and Television Antenna



Recommended for locations where serious problems of interference or multipath images are encountered. The arrangement of double collectors, as illustrated, results in greatly improved reception from one direction and a decrease in noise and reflection from opposite direction. ADJUSTABLE ALUMINUM BRACKETS PERMIT TILTING TO OBTAIN MAXIMUM RESULTS ON VERTICAL AS WELL AS HORIZONTAL POLARIZED SIGNALS. Consists of:

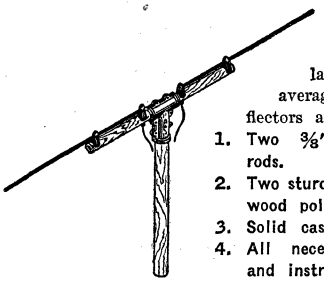
1. Eight ⅜" gauge aluminum dipole rods.
2. Six lacquer impregnated hardwood poles.
3. Aluminum angle joint brackets.
4. All necessary insulators, hardware, and instructions.

No. TA-22—Double Dipole Antenna with Double Reflectors, complete as illustrated. .....List Price $35.00

No. TA-22L—Same as above with 75 ft. of twin-lead wire. List Price $38.50

JFD STANDARD DIPOLE

F-M and Television Antenna



Here is an excellent popular-priced dipole antenna for average installations where reflectors are unnecessary. Consists of:

1. Two ⅜" gauge aluminum dipole rods.
2. Two sturdy lacquer impregnated hardwood poles.
3. Solid cast aluminum joint brackets.
4. All necessary insulators, hardware, and instructions.

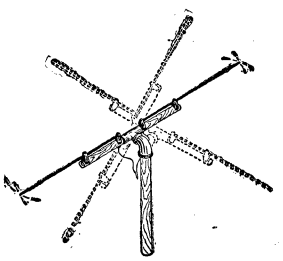
No. TA-2—Standard Dipole Assembly as illustrated, complete with all necessary accessories .....List Price $9.50

No. TA-2L—Same as above with 75 ft. Twin-lead wire. List Price $13.00

JFD "ROTO-FLEX" DIPOLE

F-M and Television Antenna

OBTAINS MAXIMUM DIRECTIONAL EFFECT!



Here is one antenna that may be turned to any position — horizontally, diagonally, vertically. Dipole assembly may be rotated in a vertical as well as a horizontal plane, so that best possible position can be selected. Brackets can then be securely locked. Particularly valuable in congested areas where tall buildings create problems of interference, reflection, etc. The JFD "ROTO-FLEX" solves these problems simply, efficiently, and economically! Consists of:

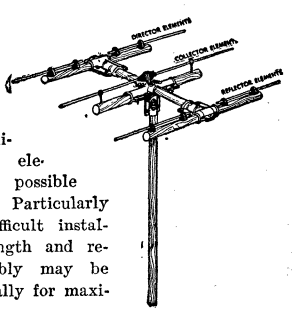
1. Two ⅜" gauge aluminum dipole rods.
2. Two sturdy lacquer impregnated hardwood poles.
3. Solid cast aluminum brackets.
4. All necessary insulators, hardware and instructions.

No. TA-25—Complete "ROTO-FLEX" assembly, as illustrated. List Price $12.50

No. TA-25L—Same as above with 75 ft. of twin-lead wire. List Price $16.00

JFD DELUXE 3 ELEMENT ANTENNA

F-M and Television Antenna



Recommended by leading manufacturers of F-M and Television Receivers for use with their equipment. This 3-element assembly, consisting of director, collector and reflector elements, will afford the highest possible signal pick-up in any location. Particularly recommended for extremely difficult installations, where low signal strength and reflection prevail. Dipole assembly may be adjusted vertically and horizontally for maximum efficiency. Consists of:

1. Six ⅜" gauge aluminum dipole rods.
2. Five lacquer impregnated hardwood poles.
3. Three sets of aluminum right angle joint castings.
4. All necessary insulators, hardware and instructions.

No. TA-4—DeLuxe Three-element Antenna complete, as illustrated. List Price $25.00

No. TA-4L—Same as above with 75 ft. of twin-lead wire. List Price $28.50

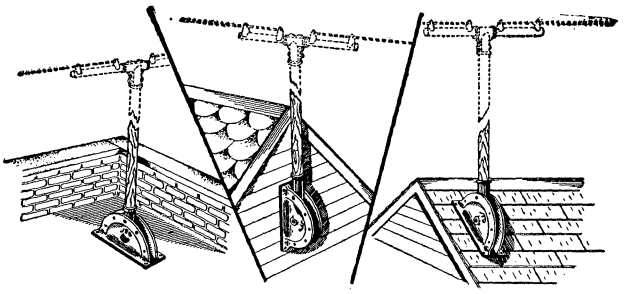
JFD PRECISION MADE

F-M TELEVISION ANTENNA ACCESSORIES



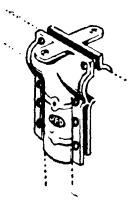
JFD MULTI-POSITION BRACKET

Here is an FM and Television Antenna bracket that takes care of all mounting problems. With this bracket, Antennas can be mounted anywhere—on wall, on window sill, on angular gable roof, on flat parapet, etc. Made of cast aluminum—light weight. Very simple to install. Will take 1½" pole. Dimensions: Height 7"; length 6"; width 4".

Cat. No. BR-8 ..... List Price $10.00

ADJUSTABLE ALUMINUM RIGHT ANGLE POLE JOINTS

With Supporting Lips for Dipole Insulator Assembly

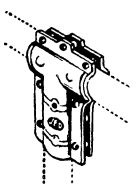


Exclusive JFD design permits mounting of wooden poles or iron pipes at right angle. Extended lips afford rigid support for dipole insulator assembly. Complete bracket kit consists of two identical half brackets, which fit snugly around pipe or pole, and eight sets of machine screws, nuts, and lockwashers, individually packaged.

No. 405—Pair of Brackets and Hardware.

List Price $4.25

STANDARD ALUMINUM RIGHT ANGLE POLE JOINTS

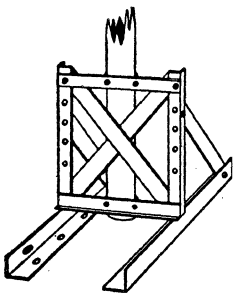


Similar to No. 405, but without supporting lips. An exclusive JFD design. Consists of two identical half brackets, designed to hold two poles or pipes rigidly at right angles. Extremely strong and durable. Complete with seven sets of machine screws, lockwashers, and nuts, individually packed.

No. 406—Pair of Brackets and Hardware.

List Price $4.25

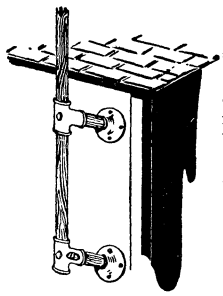
ANGLE STEEL MOUNTING BRACKET



Easily mounted on roof, wall, corner or chimney. Very strong trussed and welded construction.

No. BR3 (12"x12") ..... List Price $20.00

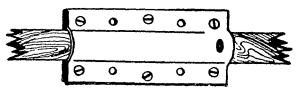
DOUBLE MOUNTING ASSEMBLY



A convenient and sturdy mounting designed to be installed on wall or inside parapet. May be adjusted from 6 to 12 inches wall.

No. BR7
List Price
per pair
$14.00

WOODEN POLE SLEEVE CONNECTOR



For joining mounting poles or for fastening guy wires to top of pole. Heavy steel, aluminum plated.

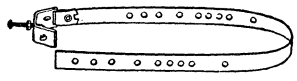
No. BR23 ..... List Price $1.25

WOODEN MOUNTING POLE

For increasing the height of the standard where necessary. Made of hard wood lacquered. 1¼" thick.

No. BR19—4 feet ..... List Price $0.60
No. BR20—6 feet ..... List Price .90

MOUNTING STRAP



Mor mounting pole on vent pipe. 18 inches long.

No. BR9 ..... List Price $0.20

PIPE CLAMPS

Will be found useful in fastening poles on wall, roof, chimney, inside of parapet or elsewhere.

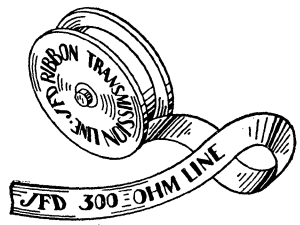
No. BR18 ..... List Price $0.06

JFD WALL INSULATOR

Exclusive JFD design. Securely locks television tape in place in all adverse weather. Made of plastic—screw is countersunk to avoid shorting.

No. WI-100 ..... List Price $0.15

JFD TWIN-LEAD TRANSMISSION LINE



Extruded parallel ribbon type lead-in wire. Insulated with polyethylene—300 OHM surge impedance. Highly recommended for F-M and Television receivers. Made to conform with exacting requirements and will withstand severest conditions of weather and use.

No. TW-1—1000' coils ..... **List Price $48.00**

JFD TRANSMISSION WIRE

Two conductor transmission wire, 20 gauge, cotton braided, weatherproof impregnated. In 1000 foot mill length spools.

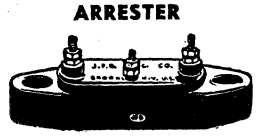
No. 945-C—1000' spool.

RG59U CABLE

Coaxial cable recommended for use where automobile ignition interferes. Increases signal gain over parallel open pairs. The copper braid is used on one side of the line. Therefore it is advisable to try reversing the lead at the receiver for best operation.

No. TW-2 ..... List Price $0.18½ per foot
(Mill reel 1000 feet)

JFD DOUBLET LIGHTNING ARRESTER



Specially designed to match JFD Home Antennas, as well as all other makes. Has built-in condenser. Three-pole connection.

No. 403 ..... List Price Ea. $0.75

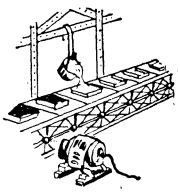
Remote Controls by Yardeny

PULSING DRIVE.... ACCURATELY CONTROLS MOTION OF 1/1000 HP TO 25 HP MOTORS AND UP!

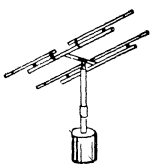
ROTATING the control knob makes and breaks the circuit, sending very short (adjustable) electrical pulses that accurately control the amount and direction of rotation *in small steps* of any AC motor, (DC on request). Rapid rotation of the knob applies continuous power to the motor. Switching contacts rated at 5 amp 115 volts AC or 3 amp 230 volts AC non-inductive load. Handles full motor current up to 1/20 HP. For larger sizes, usable in parallel with, or *instead of, push buttons* of magnetic starters up to Nema size 2. Obtainable without housing for panel mounting. *Available for immediate delivery.*

PULSING DRIVE is ideal for setting up Machine Tools, Industrial Equipment, Radio Tuning, Motor Operated Valves, Power Operated Adjustments on Machinery, etc., etc.

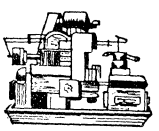
EXAMPLE: PULSING DRIVE'S single knob provides fine vernier control or swift travel across tuning range of radios.



SPOTTING CONVEYORS



ORIENTING ANTENNAS



INCHING LATHE CROSS-SLIDE

SYNCHRO-LINK....

SYNCHRO-LINK is a remote control system that will quickly, accurately, and easily position a distant motor. It is based on a self balancing electric bridge, and consists of a control knob, controller box, and a controlled positioning motor that duplicates the control knob setting, for a wide variety of applications. Its standard interchangeable components can identically control a number of slave positioners from a single knob.

SYNCHRO-LINK utilizes any standard motor now used by you. Finger tip ease effortlessly controls *any size* and torque motor over *any distance*. SYNCHRO-LINK accuracy is better than 1% of the full range travel regardless of torque. Can be manually or automatically controlled. Uses very little power since it is a control circuit and carries only control currents thru three light gage conductors. Self-synchronous, it reproduces set position even after a power shut-off.

SPEED—Adjustable for motors covering the range from 2 sec. up.

RATING—Up to 1/20 HP—larger size on request.
